MINISTRY OF HEALTH

**ANNUAL HEALTH STATISTICAL TABLES
AND FIGURES 2024**

SEPTEMBER, 2025

TABLE OF CONTENTS

LIST OF TABLES.....	iv
LIST OF FIGURES.....	vi
FOREWORD.....	ix
ACKNOWLEDGEMENT.....	x
EXECUTIVE SUMMARY.....	xi
METHODOLOGY.....	xiii
ABBREVIATIONS.....	xiv
CHAPTER ONE.....	1
1.0. POPULATION PROJECTION STATISTICS AND ADMINISTRATIVE BOUNDARIES IN TANZANIA MAINLAND YEAR 2023-2035.....	1
CHAPTER TWO.....	8
2.0. HEALTH INFRASTRUCTURE.....	8
2.1. DISTRIBUTION OF HEALTH FACILITIES IN TANZANIA MAINLAND 2024.....	8
2.2. BED CAPACITY IN HEALTH FACILITIES, 2024.....	21
2.2.1. BEDS IN HOSPITALS.....	21
2.2.2. BEDS IN HEALTH CENTERS.....	21
2.2.3. BEDS IN DISPENSARIES.....	21
2.2.4. BEDS IN CLINICS.....	21
2.3. HEALTH FACILITY MEDICAL EQUIPMENTS IN TANZANIA MAINLAND, 2024.....	34
CHAPTER THREE.....	46
3.0. SKILLED AND SUPPORT HEALTH STAFFING LEVELS IN TANZANIA MAINLAND 2024.....	46
3.1. HUMAN RESOURCES FOR HEALTH.....	46
3.1.1. KEY PERFORMANCE INDICATORS.....	46
3.1.2. NUMBER OF NURSE/MIDWIVES PER 10,000 POPULATION IN TANZANIA MAINLAND FROM 2019-2024.....	47
3.1.2. ASSISTANT MEDICAL DOCTORS PER 10,000 POPULATIONS IN TANZANIA MAINLAND FROM 2020-2024.....	48
3.1.3. PHARMACY AND LABORATORY STAFF PER 10,000 POPULATION IN TANZANIA MAINLAND FROM 2019-2024.....	48
3.1.4. DISTRIBUTION OF PHYSICIAN, NURSE AND MIDWIFE PER 10,000 POPULATION ACROSS THE REGIONS IN TANZANIA MAINLAND, 2024.....	49
3.1.5. HRH (SELECTED CADRE) PER 10,000 POPULATIONS.....	49
3.1.6. HEALTH WORKERS PRODUCTION AND RECRUITMENT TRENDS FROM 2012 – 2024.....	51
CHAPTER FOUR.....	64
4.0. MORBIDITY AND MORTALITY STATISTICS.....	64
4.1. OUTPATIENT DEPARTMENT.....	64
4.1.1. TOP TEN LEADING OPD CAUSES OF DISEASES AMONG UNDER FIVES 2023 – 2024.....	64
4.1.2. TOP TEN LEADING OPD CAUSES OF DISEASES AMONG FIVE YEARS AND ABOVE 2023 – 2024.....	65

4.2. INPATIENTS ATTENDANCES (IPDS)	71
4.2.1. TOP TEN LEADING CAUSES OF ADMISSION AMONG UNDER FIVES 2023 – 2024 ...	71
4.2.2. TOP TEN LEADING CAUSES OF ADMISSION AMONG FIVE YEARS AND ABOVE 2023 – 2024	71
4.3. CAUSES OF DEATH	78
4.3.1. CAUSES OF DEATHS FOR CHILDREN LESS THAN 5 YEARS	78
4.3.2. CAUSES OF DEATHS FOR FIVE YEARS AND ABOVE IN MAINLAND TANZANIA 2024	78
4.4. NOTIFIABLE DISEASES IN TANZANIA MAINLAND YEAR 2024	79
4.4.1. REPORTED CASES OF NOTIFIABLE DISEASES IN TANZANIA MAINLAND 2023	79
CHAPTER FIVE	95
5.0. REPRODUCTIVE AND CHILD HEALTH SERVICES	95
5.1. ANTENATAL CARE SERVICES IN TANZANIA MAINLAND IN 2024	95
5.2. DELIVERY SERVICES IN TANZANIA MAINLAND IN 2024	105
5.3. POSTNATAL SERVICES IN TANZANIA MAINLAND 2024	118
5.4. IMMUNIZATION	119
5.4.1. IMMUNIZATION PERFORMANCE IN 2024	119
5.4.2. TREND OF IMMUNIZATION COVERAGE OF ANTIGENS GIVEN AT THE SAME TIME	120
5.4.3. TREND OF DTP1, DTP3, MR1 AND MR2 COVERAGE FOR FIVE YEARS	121
5.4.4. TREND OF DTP3 VACCINATION PERFORMANCE	122
5.4.5. VACCINATED AND UNDER-VACCINATED STATUS DTP3 VACCINE (2020–2024)....	122
5.4.6. HPV VACCINES COVERAGE TRENDS	123
5.4.7. TREND OF HPV COUNCIL PERFORMANCE	124
5.4.8. VACCINE PREVENTABLE DISEASES (VPD) SURVEILLANCE	124
5.8.9. TRENDS IN ACUTE FLACID PARALYSIS DETECTION RATE	133
5.5. NEW BORNES	137
5.5.1. LIVE BIRTH, STILL BIRTH AND UNDERWEIGHT <2.5KG IN TANZANIA MAINLAND .	137
5.6. FAMILY PLANNING SERVICES IN TANZANIA MAINLAND	147
5.6.1. FAMILY PLANNING UPTAKE	147
5.6.2. NEW ACCEPTORS FOR MODERN FAMILY PLANNING	147
5.6.3. ADOLESCENTS FAMILY PLANNING COVERAGE	148
5.6.4. FAMILY PLANNING OUTREACH SERVICES	149
5.7. REPRODUCTIVE CANCERS SERVICES	161
CHAPTER SIX	182
6.0. HIV PROGRAM DATA	182
6.1. PEOPLE ENROLLED IN HIV CARE AND TREATMENT SERVICES	182
6.2. HIV CASCADE IN ART CARE AND TREATMENT PROGRAM	184
CHAPTER SEVEN	195
7.0. TUBERCULOSIS AND LEPROSY	195
7.1. TUBERCULOSIS	195
7.1.1. TUBERCULOSIS CASE NOTIFICATION RATE	195

7.1.2. COLLABORATIVE TB/HIV SERVICES	195
7.1.3. TUBERCULOSIS TREATMENT OUTCOME FOR CASES NOTIFIED IN 2023 (NEW AND RELAPSE TB CASES).....	198
7.1.4. PROGRAMATIC MANAGEMENT OF DRUG-RESISTANT TUBERCULOSIS (PMDT) ..	199
7.2. LEPROSY	200
7.2.1. NOTIFICATION OF LEPROSY CASES	200
CHAPTER EIGHT	210
8.0. ENVIRONMENTAL HEALTH AND SANITATION	210
8.1. PERFORMANCE OF ENVIRONMENTAL HEALTH AND SANITATION IN TANZANIA MAINLAND IN 2024	210
8.2. NATIONAL COVERAGE OF SANITATION AND HYGIENE	210
8.3. TREND OF HOUSEHOLDS WITH IMPROVED LATRINE FOR FIVE YEARS IN TANZANIA MAINLAND FROM 2020 TO 2024	211
8.4. TREND OF HOUSEHOLDS WITH NO LATRINE IN TANZANIA MAINLAND FROM 2020 TO 2024	212
8.5. TREND OF HOUSEHOLDS WITH BASIC HAND WASHING FACILITY FOR FIVE YEARS IN TANZANIA MAINLAND FROM 2020 TO 2024	213
8.6. HOUSEHOLD WITH SAFELY MANAGED SANITATION IN TANZANIA MAINLAND FROM 2020 TO 2024	213
8.7. REGIONAL PERFORMANCE ON HYGIENE AT HOUSEHOLD LEVEL IN TANZANIA MAINLAND FOR THE YEAR 2024	214
8.8. ENVIRONMENTAL PROTECTION AND POLLUTION CONTROL AT HEALTH CARE FACILITIES	215
8.9. ENVIROMENTAL PROTECTION AND POLLUTION CONTROL AT HEALTH CARE FACILITIES	216
8.10. WORKPLACE PROGRAMME FOR HEALTH CARE WORKERS IN REGION AND DISTRICT FACILITIES	217
8.11. OCCUPATIONAL EXPOSURE REPORTED IN TANZANIA MAINLAND FOR THE YEAR 2023 AND 2024	217
8.12. SCREENING OF TRAVELLERS AT PORT OF ENTRIES IN TANZANIAN MAINLAND FOR THE YEAR 2023 AND 2024.....	218
CHAPTER NINE	228
9.0. HEALTH COMMODITIES AVAILABILITY STATUS FROM HEALTH FACILITIES -2024	228
CONCLUSION	239

LIST OF TABLES

TABLE 1: POPULATION STATISTICS, LIVE BIRTH AND OTHER AGE CATEGORIES IN TANZANIA MAINLAND BY DISTRICTS – 2024	2

FOREWORD

The Ministry of Health (MoH) is committed to strengthening evidence-based planning and decision-making within the health sector and across the broader national context. To support this goal, the Ministry produces an annual report that provides a comprehensive overview of the country's health service delivery, based on data from the National Health Information System (HMIS).

Since 2009, through the Monitoring and Evaluation Unit (MEU), the Ministry has consistently published the Annual Health Statistical Tables and Figures (AHSTF) report. This publication serves as a key reference for sharing health indicators with stakeholders and presents a summary of healthcare service provision for the preceding calendar year (January–December).

The AHSTF compiles information from routine health services, including leading causes of morbidity and mortality, demographic projections from the National Bureau of Statistics, trends in reproductive, maternal, newborn, and child health, progress in HIV/AIDS services, status of human resources for health, environmental health concerns, health infrastructure, notifiable diseases, and advances in malaria, tuberculosis, and leprosy control.

This report is an important resource for Government Ministries, Departments, and Agencies (MDAs), policymakers, development and implementing partners, academic institutions, researchers, scientists, and the general public. It not only reflects the health status of Tanzania in 2024 but also allows for comparisons with previous years since 2019.

I encourage all stakeholders to make use of this report constructively, as a tool for advancing health planning, research, and policy in our country.

Dr. Seif A. Shekalaghe
PERMANENT SECRETARY

ACKNOWLEDGEMENT

The preparation of this Health Technical Report, presenting the Annual Health Statistics Tables and Figures (AHSTF), has been made possible through the collective efforts of Ministry of Health and PORALG. I wish to express my sincere gratitude to the Permanent Secretary of the Ministry of Health for providing overall guidance and leadership throughout the process.

The Ministry of Health also extends its appreciation to all organizations, institutions, and individuals who contributed directly or indirectly to the production of the 2024 AHSTF report. While it is not possible to mention everyone by name, their input has been invaluable. In particular, we recognize the dedication of the Monitoring and Evaluation Unit (MEU) staff, who coordinated and facilitated the entire process.

Special thanks are further extended to the Directorate of Reproductive, Maternal, and Child Health, the Directorate of Human Resources Development (DHRD), the Directorate of Curative Services (DCS), the Directorate of Preventive Services (DPS), the Office of the Chief Pharmacist, and Ministry programs for their critical technical contributions.

We gratefully acknowledge the financial support provided by the Global Fund (GF), the Bloomberg Data for Health Initiative, and other partners, which enabled the successful development and production of this report. Finally, we recognize the University of Dar es Salaam and HISP Tanzania for their valuable technical support in maintaining the DHIS2 platform.

Dr. Grace E. Magembe
CHIEF MEDICAL OFFICER

EXECUTIVE SUMMARY

In 2024, the Tanzanian Healthcare Sector continued its trend of significant advancements in delivering healthcare services across the nation, as elucidated in the Annual Health Statistical Tables and Figures report. Here's a synopsis of key progress indicators:

According to the 2022 census, the total population of Tanzania's mainland stood at 59.5 million. There has been a consistent upward trajectory, with figures escalating to 63.2 million in 2024. This growth, reflecting a 3.2% annual rate, is projected by the National Bureau of Statistics (NBS) to reach 89.2 million by 2035.

1. Health facility numbers increased by approximately 8.8% from 11,805 in 2023 to 12,846 in 2024. This comprised 462 hospitals, 1,254 health centers and 8,328 dispensaries. However, 1,013 health clinics, 1,676 diagnostic laboratories, and other facilities such as maternity/nursing homes and blood transfusion centers. Ownership breakdown: 7,545 (58.7%) government-owned, 1,096 (8.5%) by Faith Based Organizations, 82 (0.6%) by Parastatal, and 4,123 (32.1%) by the Private sector.
2. A total of 177,340 health workers were available in 2024 representing only 45% of the required 391,950 across both public and private Health sector in Tanzania Mainland while there were only 126,925 (36%) health care workers in 2023. This reflects an increase in human resource from 36% in 2023 to 45% in 2024
3. The year 2024, Upper Respiratory Infection (URTI) accounted for 39.8%, Malaria for 9.67%, and Diarrhea with no dehydration for 8.7% of diagnosed diseases in outpatient departments for children under five years while in 2023 the same diseases accounted for 38.7%, 10.6% and 8.5% respectively. For those aged five years and above, URTI (18.2%), UTI (15.5%), and Malaria (6.3%) were predominant compared to 18.9%, 15.9% and 6.8% respectively in 2023.
4. The year 2024 Pneumonia (27%), Malaria (19.5%), and Acute Diarrhoea (14.5%) as the leading diseases requiring inpatient care for children under five years while in 2023 the same diseases accounted for 28.2%, 19.8% and 13.3% respectively. For those aged five years and above, Malaria (14.7%), UTI (9.5%), and Hypertension (9.1%) were primary causes of hospitalization compared to Malaria 14.9%, UTI 9.0% and Anemia 8.2% in 2023.
5. In 2024, a total of 735,876 cases were reported, including 173 deaths. The leading reported cases included Diarrhoea in children less than 5 years (381,742) followed by Pneumonia (245,490) cases in children less than 5 years and Typhoid (50,352)
6. Immunization coverage in 2024 surpassed 90% for all antigens, except for Td2+, which recorded 88% coverage.
7. Antenatal care first visits before 12 weeks gestation have slightly increased from 42.9 in 2023 to 43.7% in 2024, with facility deliveries rising from 85.8% to 87.5% during the same period, surpassing the national target of 85% by 2025.
8. Live births increased from 2,148,365 in 2023 to 2,258,033 in 2024.

9. The average national utilization rate for new acceptors of modern family planning was 52.6% in 2024, almost hitting the national target of 42% set for 2025 (as outlined in One Plan III).
10. Cervical cancer screening among women aged 30-49 decreased from 53.2% in 2023 to 38.3% in 2024 although slight decrease has been observed, this performance is still above the set target of 30% (One Plan III 2025).
11. The country has managed to meet the UNAIDS target of 95-95-95 as 92% of PLHIV were aware of their HIV status, out of whom, 99% were on HIV treatment, and of these, 98% were virally suppressed by the year 2024 comparing to 97%, 96% and 96% respectively in 2023.
12. TB cases Case Notification Rate (CNR) was 117 cases per 100,000 population in 2024. This figure is lower than both the target of 151/100,000 and the previous year's rate of 147/100,000
13. In 2024, 1,255 new leprosy cases were reported, translating to a notification rate of 19.1 per 1,000,000 population as compared to 1,373 cases equal to 22 per 1,000,000 in 2023.
14. The proportion of households with improved latrines increased from 72.3% in 2023 to 77.9% in 2024. The percentage of households with no latrine decreased slightly from 1.4% in 2023 to 1.3% in 2023, indicating a reduction in households practicing Open Defecation (OD). The national target is to achieve zero coverage of OD by 2030.
15. In 2024, the average availability of health commodities stood at 85%, marking a 9% increase from the 76% recorded in 2024, although it remains below the national target of 100%

METHODOLOGY

The primary source of data for this report is the District Health Information Software (DHIS2), complemented by other databases including HRHIS, NSMIS, and VIMS. DHIS2 compiles electronic routine health service data collected through the Health Management Information System (HMIS). Unless otherwise indicated, the data presented covers the period from January to December 2024, drawn from 11,805 health facilities across the country, both public and private.

The Annual Health Statistical Tables and Figures (AHSTF) report summarizes patient-level data recorded at the point of care using HMIS registers and tally sheets. At the end of each month, facility data is aggregated and reported through HMIS, then entered into the DHIS2 platform at council level. To ensure quality, Council Health Management Teams (CHMTs) review and validate facility-level data, followed by further validation by regional teams. Identified inconsistencies are referred back to council HMIS focal persons for verification in collaboration with health facility providers.

The Monitoring and Evaluation Unit (MEU) of the Ministry of Health coordinated the production of this report. The process included consolidating DHIS2 data, integrating inputs from program-specific reports and government departments, and conducting direct verifications with CHMTs and RHMTs where necessary. Central-level analysis was carried out using DHIS2 to generate statistical tables and figures. Stakeholders were engaged at multiple stages to review and confirm data prior to interpretation and report writing. The draft report underwent technical review by the ICT, Information Systems, and ME&L Technical Working Group before final submission to the Permanent Secretary for approval.

ABBREVIATIONS

CHAPTER ONE

1.0. POPULATION PROJECTION STATISTICS AND ADMINISTRATIVE BOUNDARIES IN TANZANIA MAINLAND YEAR 2023-2035

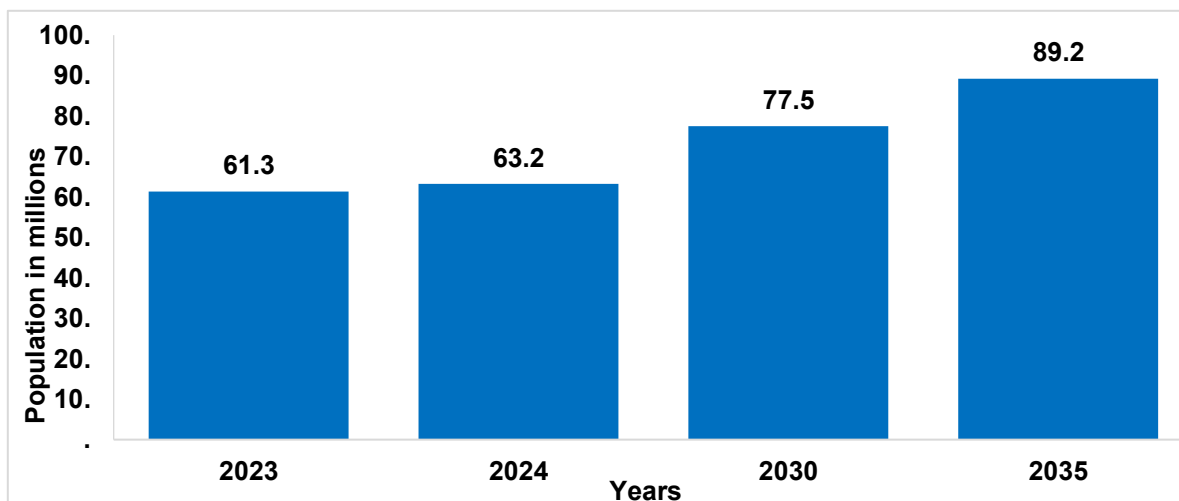

The National Bureau of Statistics (NBS) in Tanzania serves as the primary authority for all official statistics in the nation. It is tasked with collecting and disseminating census results, along with a wide range of economic, social, and demographic data, making it an essential pillar of the country's data system. In 2024, the NBS projected the mainland population at 63.2 million, with an additional 2,036,454 people residing on the islands.

The NBS carries out a comprehensive national census every ten years. The data collected serves as the basis for producing annual population forecasts, which support effective planning and resource allocation. Findings from the 2022 census reported Tanzania's mainland population at 59.5 million. Projections since then show consistent growth, reaching 63.2 million in 2024. With growth rate of 3.2%, the NBS estimates that the mainland population will rise to 89.2 million by 2035, as shown in Figure 1.

Population projections for Tanzania Mainland play a critical role in planning across all administrative levels, including the health sector. They provide a foundation for key decisions such as estimating medical supply needs and determining human resource requirements. Figure 2 and Table 1. present the 2024 regional and district-level population projections for the mainland. It is worth noting that service delivery boundaries managed by Local Government Authorities (LGAs) sometimes overlap, especially in urban areas. This overlap can lead to multiple facilities serving populations outside their official catchment areas, occasionally causing service coverage indicators to exceed 100%.

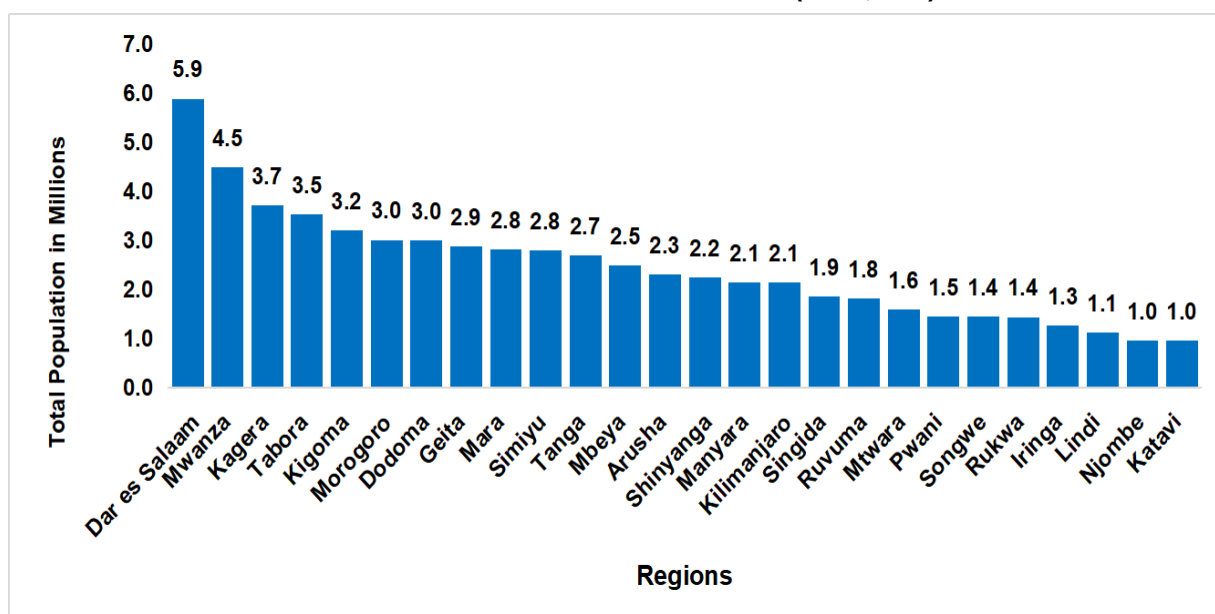

A consistent demographic trend persists where Dar es Salaam retains its position as the country's most populous city, surpassing the 5.9 million in 2024. Mwanza region closely follows with a population exceeding 4.5 million, while Kagera closely trails with 3.7 million residents (Figure 1 and Table 2).

CHAPTER TWO

2.0. HEALTH INFRASTRUCTURE

2.1. DISTRIBUTION OF HEALTH FACILITIES IN TANZANIA MAINLAND 2024

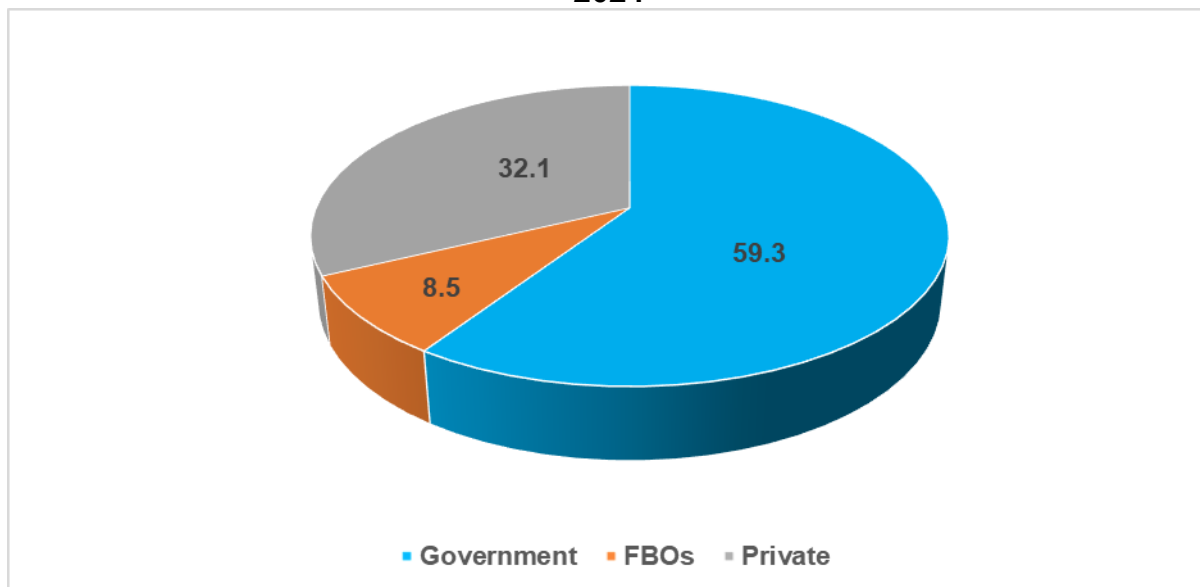

Access to healthcare services is a key determinant of health-seeking behaviour, which ultimately contributes to a healthier population. Enhancing healthcare accessibility remains a major health priority in low-income nations. The government has continued to build healthcare facilities with the goal of ensuring that every Tanzanian can receive services close to their place of residence. In line with the 2020/25 election manifesto, the government is committed to prioritizing the completion of unfinished healthcare structures (maboma), guided by factors such as geographic location, population size, and disease burden.

As of 2024, the total number of healthcare facilities reached 12,846, compared to 11,105 in 2023, representing an increase of 8.8 percent. These include 462 hospitals, 1,254 health centers, 8,328 dispensaries, 1,013 health clinics, 1,676 diagnostic laboratories, and other facilities such as maternity/nursing homes and blood transfusion centers. This growth is attributed to the completion and opening of new facilities, improvements in the electronic Health Facility Registry used for data collection, and the registration of newly established private healthcare facilities.

TABLE 2: SUMMARY OF DISTRIBUTION OF HEALTH FACILITIES BY TYPES AND OWNERSHIP 2022 TO 2024

2.2. BED CAPACITY IN HEALTH FACILITIES, 2024

In the Tanzania Mainland, each health facility has a specific bed capacity determined by its level and structural design. Bed capacity refers to the maximum number of beds that can be accommodated within a particular facility.

The number of beds available in both public and private facilities is a key indicator of the capacity to provide inpatient care. The Ministry of Health is fully responsible for overseeing and assessing the adequacy of standard beds across all health facilities.

In 2024, the total bed capacity was 147,159, with 140,352 beds available, resulting in a shortfall of 6,807 beds. This shows an increase compared to 2023, where the capacity was 145,224 beds and the number of available beds was 129,284. The distribution of available beds in 2024 was as follows: 102,109 in general and maternity wards, 22,488 examination beds and 12,767 delivery beds. Dispensaries recorded the highest number of delivery beds compared to other health facility levels (Figure 5).

2.2.1. BEDS IN HOSPITALS

In 2024, the total hospital bed capacity in Tanzania Mainland reached 71,252, while beds available were 63,875 and delivery beds were 1,961 (Figure 5). Regional referral hospitals are expected to have bed capacities ranging from 176 to 450, typically consisting of nine (9) or more wards. District hospitals generally have a capacity of 100 to 175 beds and usually consist of seven wards.

2.2.2. BEDS IN HEALTH CENTERS

In 2024, the total bed capacity in health centers stood at 35,924, with 34,922 beds available, leaving a deficit of 1,002 beds. According to the Tanzania Staffing Level Guide, a health center should have 24 beds.

2.2.3. BEDS IN DISPENSARIES

Dispensary beds are primarily intended for pre- and post-delivery care. In 2024, the number of available beds was 38,970 while delivery beds were 7,683. According to the Tanzania Staffing Level Guide, each dispensary should have 1 bed.

2.2.4. BEDS IN CLINICS

In clinic services, most beds were found in polyclinics. Figure 5 shows the total available beds were 2,585, including 64 delivery beds.

2.3. HEALTH FACILITY MEDICAL EQUIPMENTS IN TANZANIA MAINLAND, 2024

Medical equipment plays a crucial role in diagnosing, treating diseases, and facilitating rehabilitation following illness or injury. Its use is most vital in health facilities, where it can function independently or in conjunction with accessories, consumables, or other medical devices. Equipment enables healthcare professionals to accurately assess patients' medical needs.

The range of medical equipment and supplies is continually growing. The primary categories include electronic devices, diagnostic tools, surgical instruments, durable medical equipment (DME), acute care supplies, storage and transport solutions.

**TABLE 6: HEALTH FACILITY MEDICAL EQUIPMENT AND TRANSPORTATION
IN PRIMARY LEVEL, 2024**

Equipment	Equipment Status	2023	2024
Microscope	Functional	3369	3,394
	Not Functional	782	674
X-ray Machines	Functional	286	358
	Not Functional	65	84
Ultra sound	Functional	298	642
	Not Functional	22	52
Sterilizer	Functional	4136	4289
	Not Functional	571	594
Dental Chair	Functional	634	733
	Not Functional	182	135
Vehicles	Functional	1023	1236
	Not Functional	313	349
Motorcycles	Functional	1375	1885
	Not Functional	528	568

The table above shows that in 2024, there were 4,068 microscopes in health facilities, with 16.6% being non-functional. Additionally, there were 442 X-ray machines, but 19% were not operational.

Sterilizer equipment is crucial in health facilities for sterilizing instruments. These machines use steam under pressure to eliminate harmful bacteria on items placed inside a pressure vessel. Every facility must have this machine. A total of 4,883 sterilizers were available in 2023, while 13.8% were not operational.

**TABLE 7: MEDICAL EQUIPMENT IN SECONDARY AND TERTIARY HOSPITALS

Source: Hospital inventory and MEIMIS

Across National & Super Specialized Hospitals, Zonal Hospitals, and Regional Referral Hospitals, there are a total of 1,332 pieces of medical equipment, with 1,217 functional and 115 non-functional. Among these, there are 283 dialysis machines, 9.5% of which are non-functional. There are 40 CT scan machines, with 2.5% not working. Additionally, there are 35 functional oxygen plants in the country. This achievement has been reached as installation of 25 additional Oxygen plant is underway supported by Global Fund.

CHAPTER THREE

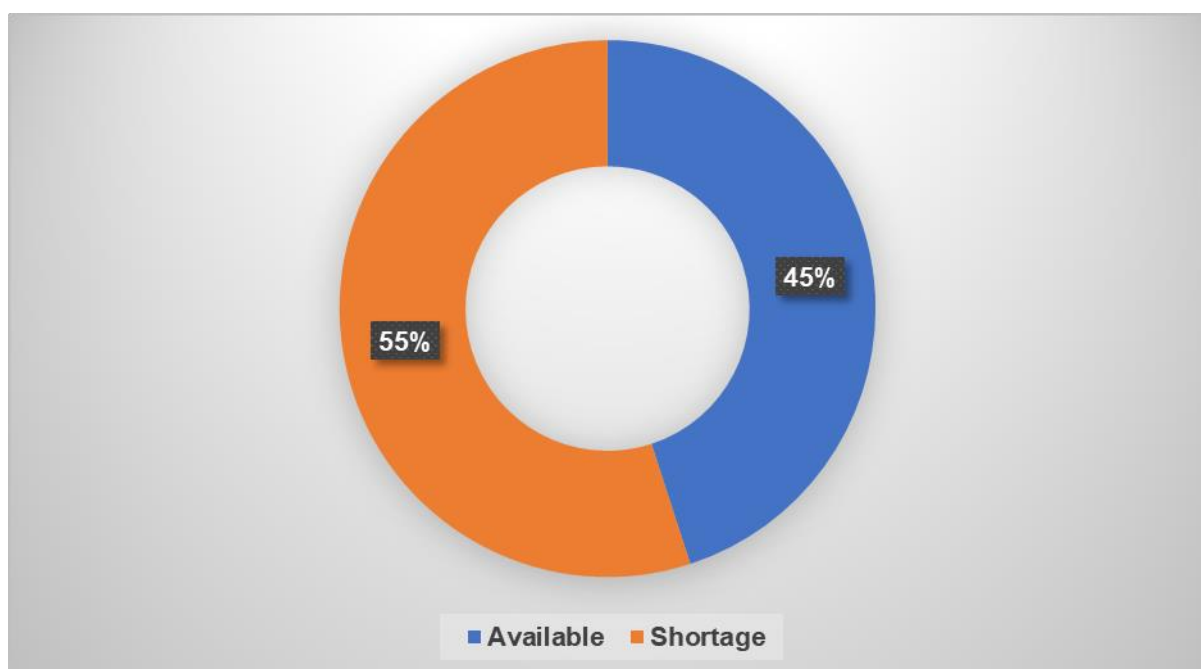

3.0. SKILLED AND SUPPORT HEALTH STAFFING LEVELS IN TANZANIA MAINLAND 2024

3.1. HUMAN RESOURCES FOR HEALTH

Tanzania continues to grapple with a severe shortage of Human Resources for Health (HRH). As per the updated staffing levels guideline (2023-2027) and for the Financial Year (FY) 2023/24, the minimum required number of health workers in the sector was 391,950. However, the actual number of available health workers stood at 177,340, accounting for only 45% of the necessary workforce, as depicted in Figure 6.

Furthermore, the availability of health workers shows an increase from 126,925 in 2023 to 177,340 in 2024 making a rise of 11% in HR availability.

3.1.1. KEY PERFORMANCE INDICATORS

The HRH density statistics for 2024 reflect a notable increase compared to the basic Human Resources for Health indicators outlined in the 2018 report. This elevation establishes a benchmark for HRH performance in the country. The trend from 2020 to 2024 is outlined in Table 9. Below are summarized key HRH performance indicators:

- The number of Nurse/Midwives per 10,000 population was 7.24 in 2023 and increased to 11.44 in 2024.
- The number of Medical Doctors (MD) per 10,000 population was 1.09 in 2023 and increased to 1.22 in 2024.
- The number of Assistant Medical Officers (AMO) per 10,000 population was 0.54 in 2023 and decreased to 0.52 in 2024.

- The number of AMOs/MDs per 10,000 population was 1.63 in 2023 and increased to 1.84 in 2024.
- The number of Pharmaceutical Staff per 10,000 population was 2.76 in 2023 and increased to 2.96 in 2024.
- The number of Health Laboratory Staff per 10,000 population was 1.19 in 2023 and increased to 1.23 in 2024.

TABLE 9: THE TREND OF HRH KEY PERFORMANCE INDICATORS FROM 2019 – 2023

	Performance Indicator	2020	2021	2022	2023	2024
1	Medical Specialists	-	-	-	0.39	0.49
2	Number of Medical Doctors (MD) per 10,000 population	1.03	1.03	0.74	1.09	1.22
3	Number of Assistant Medical Officers (AMO) per 10,000 population	0.31	0.31	0.34	0.54	0.52
4	Number of AMOs/MDs per 10,000 population	1.34	1.34	1.08	1.63	1.84
5	Number of Nurse/Midwives per 10,000 population	4.1	4.1	6.8	7.24	9.6
6	Number of Pharmaceutical Staff per 10,000 population	0.34	0.34	0.35	2.76	2.96
7	Number of Health Laboratory Staff per 10,000 population	0.96	0.96	0.8	1.19	1,23

Source: HRHIS 2024

3.1.2. NUMBER OF NURSE/MIDWIVES PER 10,000 POPULATION IN TANZANIA MAINLAND FROM 2019-2024

The number of nurses and nurse midwives per 10,000 population increased from 7.24 in 2023 to 9.6 in 2024. The Government of Tanzania has made significant efforts by recruiting more than 7,350 nurses and nurse midwives in public facilities during this period (2022-2024), these efforts are reflected the increase in the ration of nurses and midwives per 10,000 population as shown in the figure 7 below.

FIGURE 7: NURSES AND NURSE MIDWIVES PER 10, 000 POPULATIONFROM 2019 TO 2024

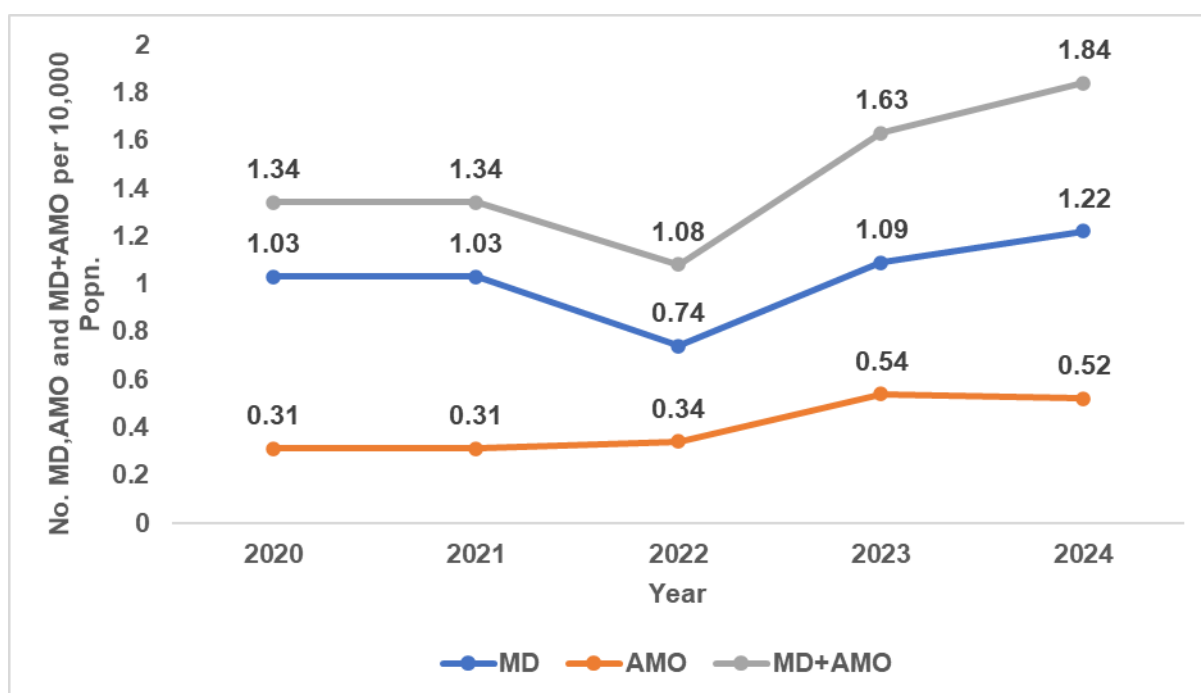

Source: HRHIS 2024

3.1.2. ASSISTANT MEDICAL DOCTORS PER 10,000 POPULATIONS IN TANZANIA MAINLAND FROM 2020-2024

The density of clinicians (MDs & AMO) increased from 1.63 in 2023 to 1.84 per 10,000 population in 2024. In 2024, the government recruited more than 13,103 healthcare workers, resulting in an increase in density to 1.22 for Medical Doctors and 1.84 for both Medical Doctors and Assistant Medical Officers, as illustrated in Figure 8.

FIGURE 8: MEDICAL DOCTORS AND ASSISTANT MEDICAL DOCTORS PER 10,000 POPULATIONS FROM 2019-2024

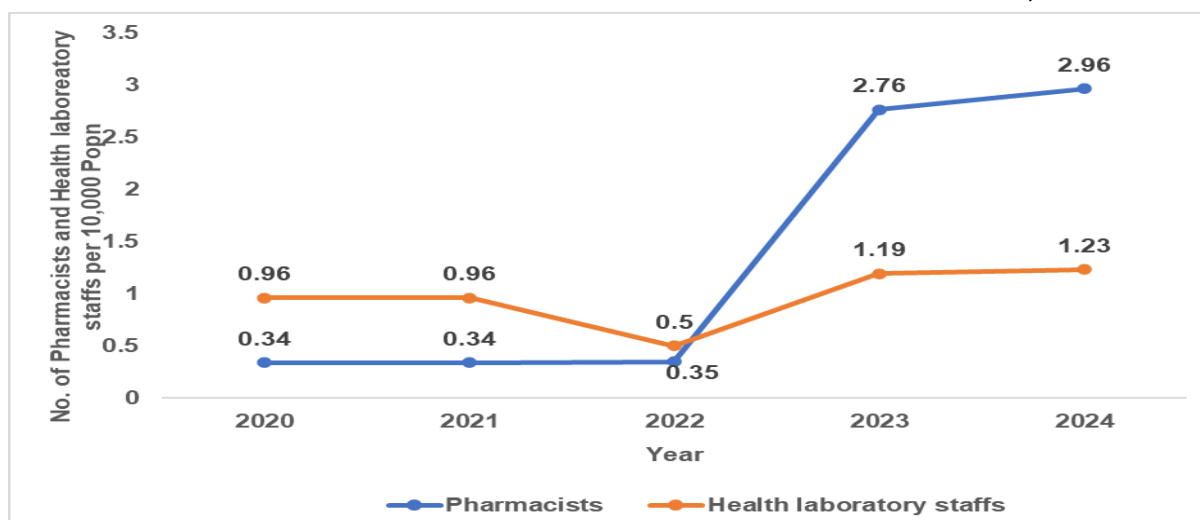

Source: HRHIS 2024

3.1.3. PHARMACY AND LABORATORY STAFF PER 10,000 POPULATION IN TANZANIA MAINLAND FROM 2019-2024

The Human Resource for Health density for Pharmacy cadres remained constant at 0.34 between the years 2019-2021 due to low recruitment. However, in 2024, a marked increase in Pharmacy HRH density (2.96) was observed, attributed to the increased number of staff recruited by the Government during the same period. The situation is slightly different for Laboratory staff, whose density has been gradually increasing, as indicated in Figure 9. The annual increase of laboratory staff is much more significant for 2024, as evidenced by the Health Laboratory Density increasing from 0.8 in 2022 to 1.23 in 2024.

FIGURE 9: PHARMACY AND LABORATORY STAFF PER 10,000

3.1.4. DISTRIBUTION OF PHYSICIAN, NURSE AND MIDWIFE PER 10,000 POPULATION ACROSS THE REGIONS IN TANZANIA MAINLAND, 2024

The national average density of physicians, nurses, and midwives is 11.44 which accounts for 50.1% of the WHO estimate of 22.8 physicians, nurses, and midwives per 10,000 population. Additionally, eleven regions (42%) surpassed the national average density of physicians, nurses, and midwives in relation to their population, while fifteen regions (57.7%) were found to be below the national average ratio, as indicated in Figure 10.

FIGURE 10: DISTRIBUTION OF PHYSICIAN, NURSE AND MIDWIFE PER 10,000 POPULATION ACROSS THE REGIONS IN TANZANIA MAINLAND 2023

Source: HRHIS 2024

3.1.5. HRH (SELECTED CADRE) PER 10,000 POPULATIONS

The distribution of HRH density for all cadres across the 26 regions in the year 2024 followed a normal distribution, with 53% of the regions found to be above the national average of 22%, as presented in Figure 12. The HRH per 10,000 population in selected cadres, namely Doctors, Nurses/Midwives, Pharmacy, and Laboratory

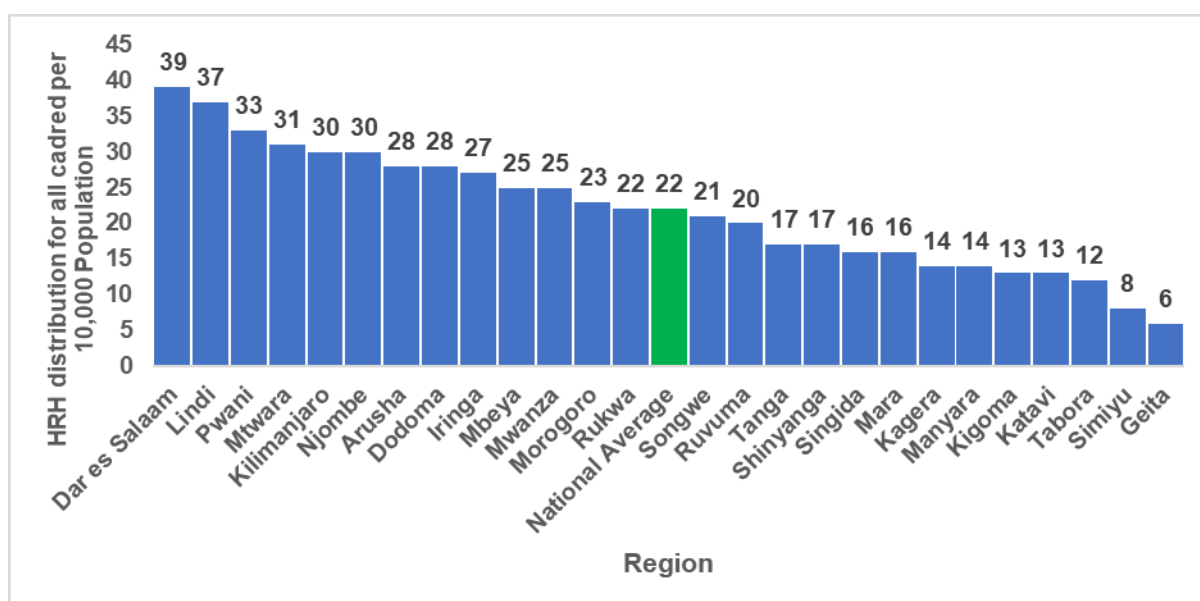

staff and other health professionals for all regions in Tanzania Mainland, is shown in Table 10.

3.1.6. HEALTH WORKERS PRODUCTION AND RECRUITMENT TRENDS FROM 2012 – 2024

Over the past decade, Tanzania has produced a total of 110,261 graduates from various health-related cadres. Among these graduates, 58,993 (54%) were absorbed into the public system, as shown in Table 3.3. The main reasons for the inability to absorb the majority of the workforce include a high wage bill and the private sector's limited capacity to employ an adequate human resource. Moreover, in line with the ten-year staff recruitment target outlined in the HRH Production Plan 2014-2024 to recruit 68,195 staff, the Ministry has achieved 50,993 (74.7%) of the target.

TABLE 11: HEALTH WORKERS PRODUCTION AND RECRUITMENT TRENDS 2012 – 2024

Year	Recruitment Permits	Number of Graduates	Number of HCWs recruited	Graduate not recruited by Public	Percentage recruited by Public
2012/2013	6,471	6,166	6,471	-305	100%

CHAPTER FOUR

4.0. MORBIDITY AND MORTALITY STATISTICS

The morbidity and mortality statistics are crucial for understanding the health dynamics of populations, identifying prevailing health concerns and developing strategies to mitigate the burden of diseases. The data is categorized into Outpatient and Inpatient departments, further disaggregated by age groups: children under 5 years old and those aged 5 years old and above across various regions and councils (Table 15 & Table 19). All the data introduced in this chapter is sourced from District Health Information Software Version 2 (DHIS2).

4.1. OUTPATIENT DEPARTMENT

4.1.1. TOP TEN LEADING OPD CAUSES OF DISEASES AMONG UNDER FIVES 2023 – 2024

Table 13 illustrates the Upper Respiratory Infections, Malaria and Diarrhoea with no dehydration consistently remained the leading outpatient diagnoses among children under five years of age in both 2023 and 2024.

Table 13: TOP TEN LEADING OPD CAUSES OF DISEASES AMONG UNDER FIVES 2023 – 2024

Rank	Diagnosis	2023	%	Diagnosis	2024	%
1	Upper Respiratory Infections	5,897,827	38.65	Upper Respiratory Infections	6,409,377	39.8
2	Malaria (BS +Ve, mRDT +Ve & Clinical)	1,611,431	10.56	Malaria (BS +Ve, mRDT +Ve & Clinical)	1,557,744	9.67
3	Diarrhea With No Dehydration	1,290,019	8.45	Diarrhea With No Dehydration	1,400,755	8.7
4	Urinary Tract Infections	1,155,583	7.57	Pneumonia, Severe & Non-Severe	1,141,393	7.09
5	Pneumonia, Severe & Non-Severe	1,119,399	7.34	Urinary Tract Infections	1,108,229	6.88
6	Skin Infection, Non-Fungal	589,557	3.86	Other Non-Infectious GIT Diseases	675,673	4.2
7	Other Non-Infectious GIT Diseases	581,158	3.81	Skin Infection, Non-Fungal	608,666	3.78
8	Intestinal Worms	441,462	2.89	Intestinal Worms	467,901	2.91
9	Diarrhea With Some Dehydration	352,029	2.31	Diarrhea With Some Dehydration	388,732	2.41
10	Skin Infection - Fungal	341,837	2.24	Skin Infection - Fungal	369,918	2.3

Source: DHIS2

4.1.2. TOP TEN LEADING OPD CAUSES OF DISEASES AMONG FIVE YEARS AND ABOVE 2023 – 2024

Table 14 shows that Upper Respiratory Infections, Urinary Tract Infections consistently and Malaria remained the leading outpatient diagnoses among aged five years and above during both 2023 and 2024.

TABLE 14: TOP TEN LEADING OPD CAUSES OF DISEASES AMONG FIVE YEARS AND ABOVE 2023 – 2024

Rank	Diagnosis	2023	%	Diagnosis	2024	%
1	Upper Respiratory Infections	5,352,939	18.89	Upper Respiratory Infections	5,193,775	18.28
2	Urinary Tract Infections	4,496,824	15.87	Urinary Tract Infections	4,413,520	15.54
3	Malaria (BS +Ve, mRDT +Ve & Clinical)	1,926,028	6.8	Malaria (BS +Ve, mRDT +Ve & Clinical)	1,801,045	6.34
4	Hypertension	1,593,592	5.62	Hypertension	1,748,226	6.15
5	Peptic Ulcers	1,056,291	3.73	Peptic Ulcers	1,131,884	3.98
6	Other Non-Infectious GIT Diseases	909,818	3.21	Other Non-Infectious GIT Diseases	1,011,397	3.56
7	Pneumonia, Severe & Non-Severe	769,942	2.72	Diabetes Mellitus	803,732	2.83
8	Diabetes Mellitus	724,889	2.56	Severe & non-severe Rheumatoid And Joint Diseases	708,793	2.5
9	Intestinal Worms	667,180	2.35	Intestinal Worms	665,847	2.34
10	Rheumatoid And Joint Diseases	603,692	2.13	Intestinal Worms	634,695	2.23

4.2. INPATIENTS ATTENDANCES (IPDS)

4.2.1. TOP TEN LEADING CAUSES OF ADMISSION AMONG UNDER FIVES 2023 – 2024

Table 16 shows that Pneumonia (both Severe and Non-Severe), Malaria, Acute Diarrhoea, and Anaemia (Severe and Mild/Moderate) consistently ranked among the top causes of hospital admissions for children under five years of age in both 2023 and 2024.

TABLE 16: TOP TEN LEADING CAUSES OF ADMISSION AMONG UNDER FIVES 2023 – 2024

Rank	Diagnosis	2023	%	Diagnosis	2024	%
1	Pneumonia, Severe & Non-Severe	118,507	28.15	Pneumonia, Severe & Non-Severe	118,282	27.09
2	Malaria (BS +Ve, mRDT +Ve & Clinical)	83,143	19.75	Malaria (BS +Ve, mRDT +Ve & Clinical)	85,023	19.47

4.3. CAUSES OF DEATH

4.3.1. CAUSES OF DEATHS FOR CHILDREN LESS THAN 5 YEARS

Table 20 presents the top ten causes of death among children under five years old between 2023 and 2024.

Under-five deaths in both years were mainly due to perinatal causes. In 2023, birth asphyxia and birth trauma accounted for 23.6% of deaths, increasing in 2024 when other perinatal conditions became the leading cause at 26.9%, followed by birth asphyxia at 22.7%. Prematurity and low birth weight remained relatively stable (11.7% in 2023 vs 11.4% in 2024). Infectious causes declined, with lower respiratory infections dropping from 13.6% to 9.1%, malaria from 6.1% to 4.0%, and diarrhoeal diseases from 2.1% to 1.8%.

**TABLE 20: TOP TEN LEADING CAUSES OF DEATHS AMONG UNDER FIVES
2023 VS 2024**

S/N	Diagnoses	2023 (% of Under 5 causes)	Diagnoses	2024 (% of Under 5 causes)
1	Birth asphyxia and birth trauma	23.6	Other conditions arising during the perinatal period	26.9
2	Lower respiratory infections	13.6	Birth asphyxia and birth trauma	22.7
3	Prematurity and low birth weight	11.7	Prematurity and low birth weight	11.4
4	Other conditions arising during the perinatal period	11.3	Lower respiratory infections	9.1
5	Malaria	6.1	Malaria	4.0

4.3.2. CAUSES OF DEATHS FOR FIVE YEARS AND ABOVE IN MAINLAND TANZANIA 2024

respiratory infections (7.2%) and hypertensive disease (6.2%). In 2024, hypertensive heart diseases became the leading cause at 7.0%, while HIV declined to 6.4% and cerebrovascular disease emerged prominently at 6.3%. Overall, non-communicable diseases increased in importance, while infectious causes such as HIV and lower respiratory infections showed a slight decline.

**TABLE 21: TOP TEN LEADING CAUSES OF DEATHS AMONG FIVE YEARS
AND ABOVE 2023 VS 2024**

S/N	Diagnoses	2023 (% Above 5 causes)	Diagnoses	2024 (% Above 5 causes)
1	HIV	7.9	Hypertensive heart diseases	7.0

4.4. NOTIFIABLE DISEASES IN TANZANIA MAINLAND YEAR 2024

4.4.1. REPORTED CASES OF NOTIFIABLE DISEASES IN TANZANIA MAINLAND 2023

Notifiable diseases are those whose occurrence must be reported to public health authorities regularly, frequently, and promptly. This list includes infectious and contagious diseases and is crucial for disease monitoring and control systems. The broad notification requirement aims to detect all public health events early, especially those with serious and international consequences, and to prevent or contain them at the source through an appropriate response before they spread extensively.

In 2024, a total of 735,876 cases were reported, including 173 deaths. The leading reported cases included Diarrhoea in children less than 5 years 381,742 including 11 deaths, followed by Pneumonia 245,490 cases in children less than 5 years and Typhoid 50,352 cases.

Other reported diseases, Conditions and events included Severe Acute Respiratory Infection 15,474 including 45 deaths, Measles 3,594 among them 327 tested positive, Cholera 11,401 including 117 deaths, Suspected cases of Bacterial Meningitis 89 all tested negative, Rabies 61, Anthrax 57, Blood Diarrhoea 34, Dengue Fever 33, Animal Bites 21,615, Snake Bites 4,725, Acute Flaccid Paralysis 1,209 all tested negative, as shown in Figure 14 and Table 22. There were no reported cases of Chickenpox, Chikungunya, Keratoconjunctivitis, Neonatal Tetanus, Plague, Smallpox, Trypanosomiasis. Yellow Fever and Viral Hemorrhagic Fever during 2024.

CHAPTER FIVE

5.0. REPRODUCTIVE AND CHILD HEALTH SERVICES

5.1. ANTENATAL CARE SERVICES IN TANZANIA MAINLAND IN 2024

Although only a few pregnant women initiate Antenatal Care (ANC) services before 12 weeks of gestation, there has been an overall increase in the utilization of ANC services in Tanzania. Table 24 illustrates that 44% of pregnant women commenced ANC services before 12 weeks of gestation in 2024. However, the national performance remains below the target of 60% set for 2025. In 2024, only 37 out of 184 councils (20.11%) met the national target, while 147 out of 184 councils (79.89%) fell short, as indicated in Table 25. Nonetheless, there has been an improvement in 2024 compared to 2023, with the utilization of ANC services before 12 weeks of gestation rising from 42.9% in 2023 to 43.7% in 2024. Furthermore, there has been a decrease in adolescent pregnant women attending ANC visits, rising from 20.3% in 2023 to 11.9% in 2024.

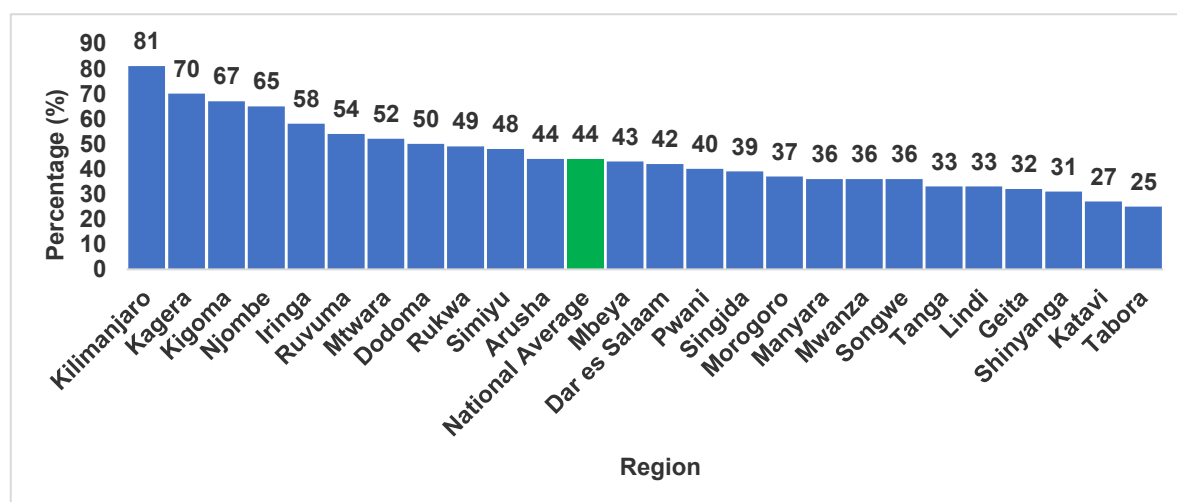

TABLE 24: THE TREND OF PROVISION OF ANC SERVICES FROM THE YEAR 2020 TO YEAR 2024

SN	Indicators	2020	2021	2022	2023	2024
1	Percentages of pregnant women attended at ANC before 12 weeks gestational age	38%	37%	39%	43%	44%
2	Percentages of pregnant women attending ANC 4+ times	90%	100%	110%	117%	124%
3	Percentage of pregnant women testing for Anaemia	65%	69%	74%	82%	94%
4	Proportional of pregnant women who received Iron and Folic Acid (IFA) supplementation for 90+ days	75%	83%	84%	92%	97%
5	Percentages of Adolescent Pregnant women attending ANC visit	11%	11%	10%	20%	12%

Source: DHIS2

Figure 15 shows the regions which had high ANC attendance of below 12 weeks gestation age which were Kilimanjaro (81%), Kagera (70%) and Kigoma (67%). The lowest performing regions in year 2024 were Tabora (25%), Katavi (27%), and Shinyanga (31%).

5.2. DELIVERY SERVICES IN TANZANIA MAINLAND IN 2024

There has been a significant improvement in institutional deliveries in Tanzania, with the coverage of deliveries in health facilities rising from 85.8% in 2023 to 87.5% in 2024, as depicted in Figure 18. This indicates that performance has met the national target of 85% for institutional deliveries by the year 2025. However, 11 out of the 26 regions reported that institutional deliveries are still lagging behind in achieving the national target. Conversely, eight (8) regions Rukwa, Geita, Simiyu, Pwani, Tabora, Singida, Shinyanga and Katavi have reported a coverage of above 100%, as illustrated in Figure 19.

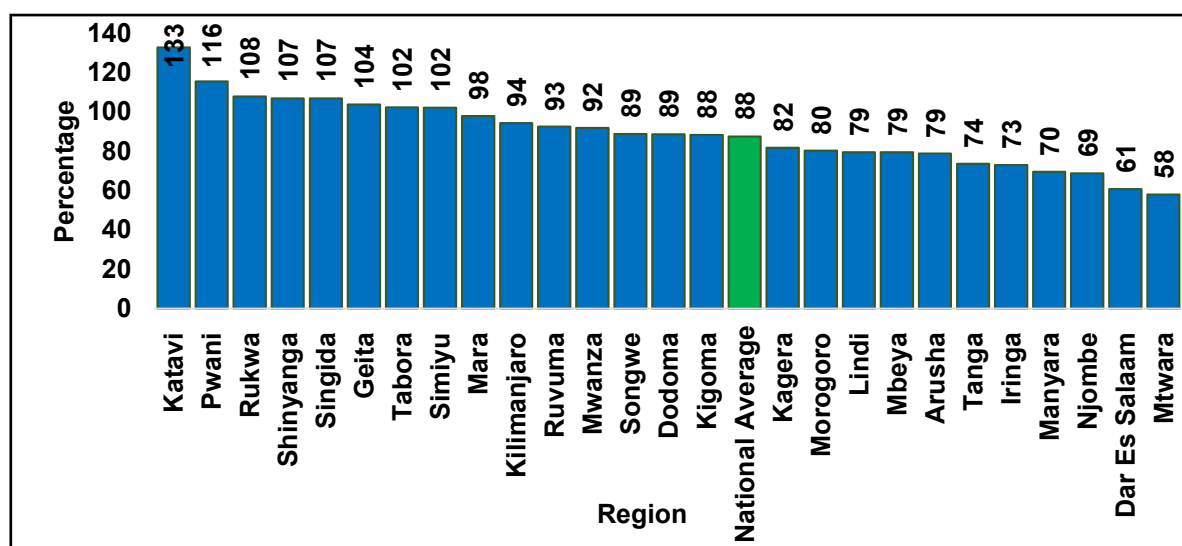

FIGURE 16: NATIONAL TREND OF COVERAGE OF DELIVERIES IN HEALTH FACILITIES FROM 2020 TO 2024

Source DHIS2

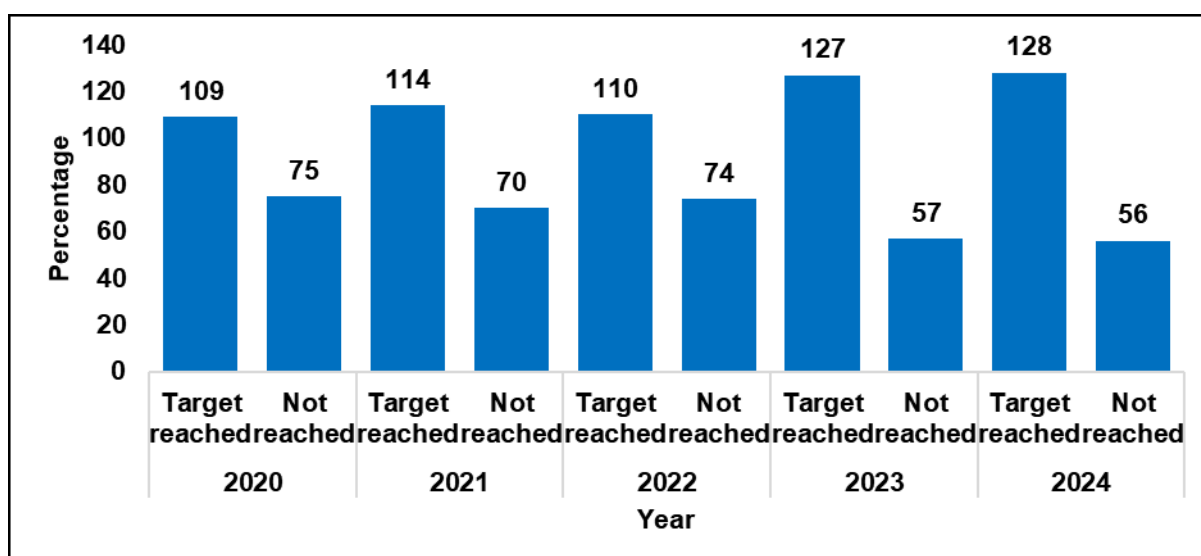

Remarkably, the Tanzania One Plan III aims for institutional delivery coverage of 75% in councils, with at least 75% coverage. Despite reaching the national target of 87% in 2024, 128 (70%) of councils achieved at least 75% coverage, while 56 (30%) councils are still falling short of reaching this benchmark. Overall, there has been a 17.4% increase from 2020 to 2024 in the number of councils that have met the national target for deliveries at health facilities, as illustrated in Table 26.

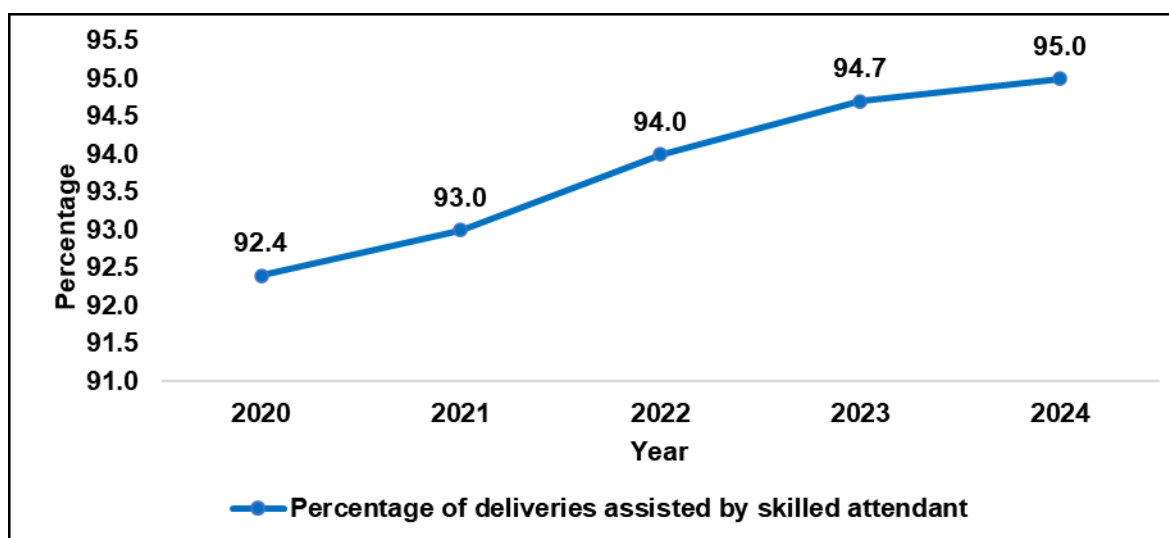

FIGURE 18: COUNCILS THAT HAVE REACHED THE NATIONAL TARGET FOR DELIVERIES IN HEALTH FACILITIES FROM 2020 TO 2024

Source DHIS2

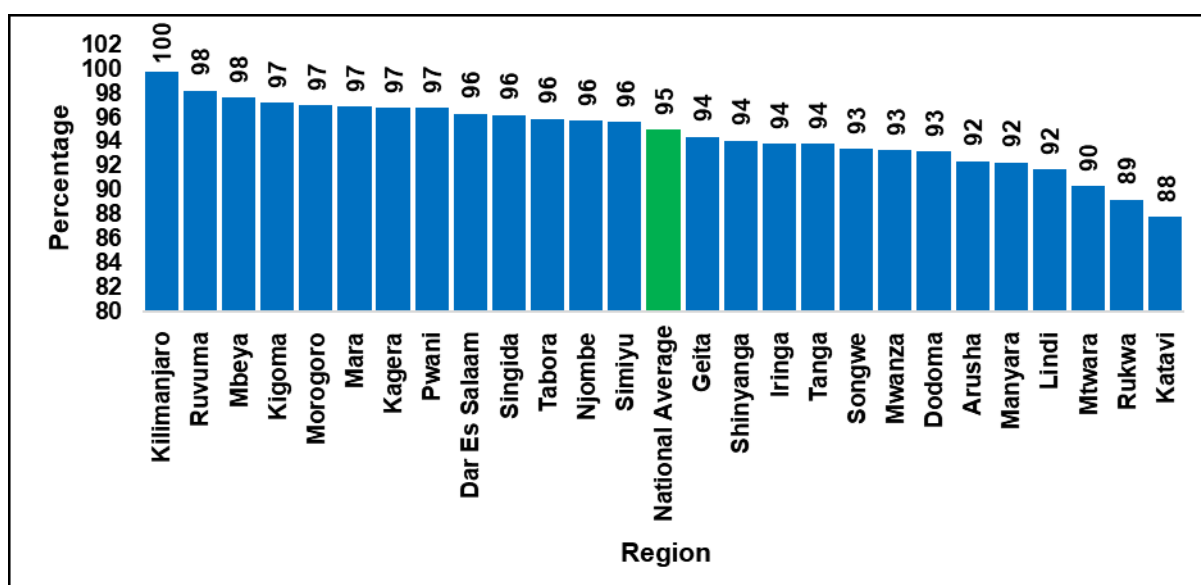

The percentage of deliveries assisted by Skilled Birth Attendants (SBAs) has increased from 92.4% in 2020 to 95% in 2024. However, 10 councils have not attained this target. It is noteworthy that only 128 councils have achieved the national target for institutional delivery coverage (75%) complemented by SBA rate of 85%, as depicted in Figures 20 and Figure 19. Table 26 provides detailed data on deliveries and SBAs by place of delivery.

Source DHIS2

Caesarean sections (CS) are absolutely critical for saving lives in situations where vaginal deliveries could be risky. Therefore, it's crucial for all health systems to guarantee timely access for women when necessary. The rate of CS delivery has remained the same 11.6% between 2022 and 2023 and dropped to 11.4 by 2024, as illustrated in Figure 21. This suggests that the services are accessible in most areas, although the national target for the CS rate by 2025 was set at 10%.

FIGURE 21: CAESAREAN SECTION DELIVERY RATE IN TANZANIA FROM 2020 TO 2024

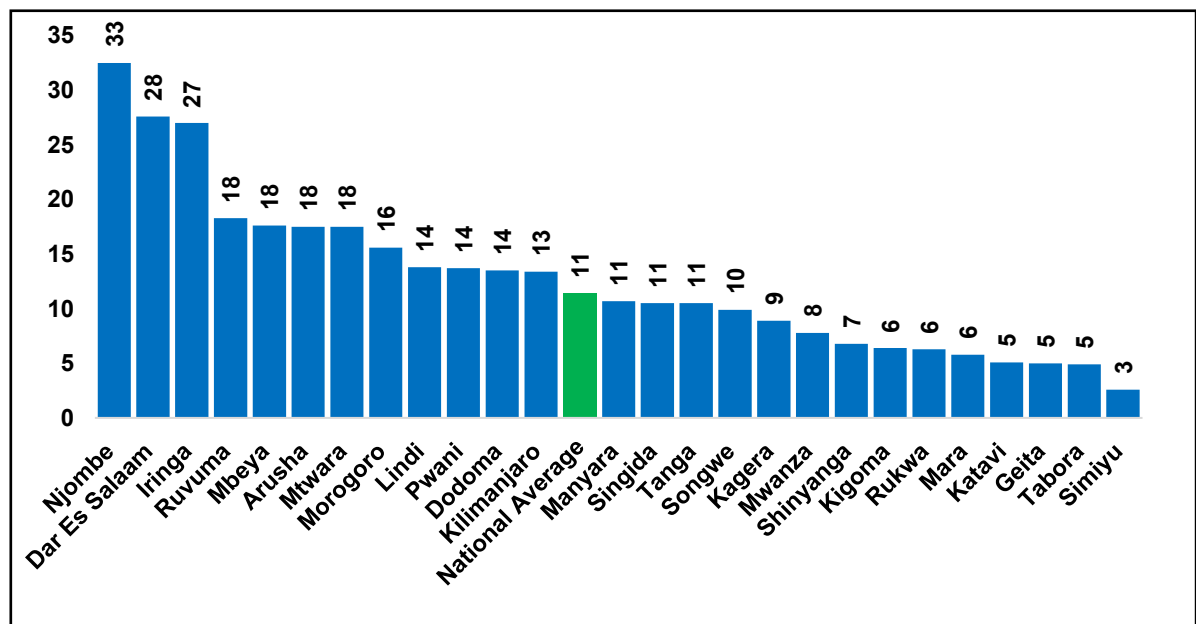

Source DHIS2

The CS delivery rate varies significantly by region in 2024, ranging from 2.6% in Simiyu to 32.5% in Njombe. The five regions with the lowest rates are Simiyu (2.6%), Tabora (4.9%), Geita (5.0%), Katavi (5.1%), and Mara (5.8%). Conversely, three

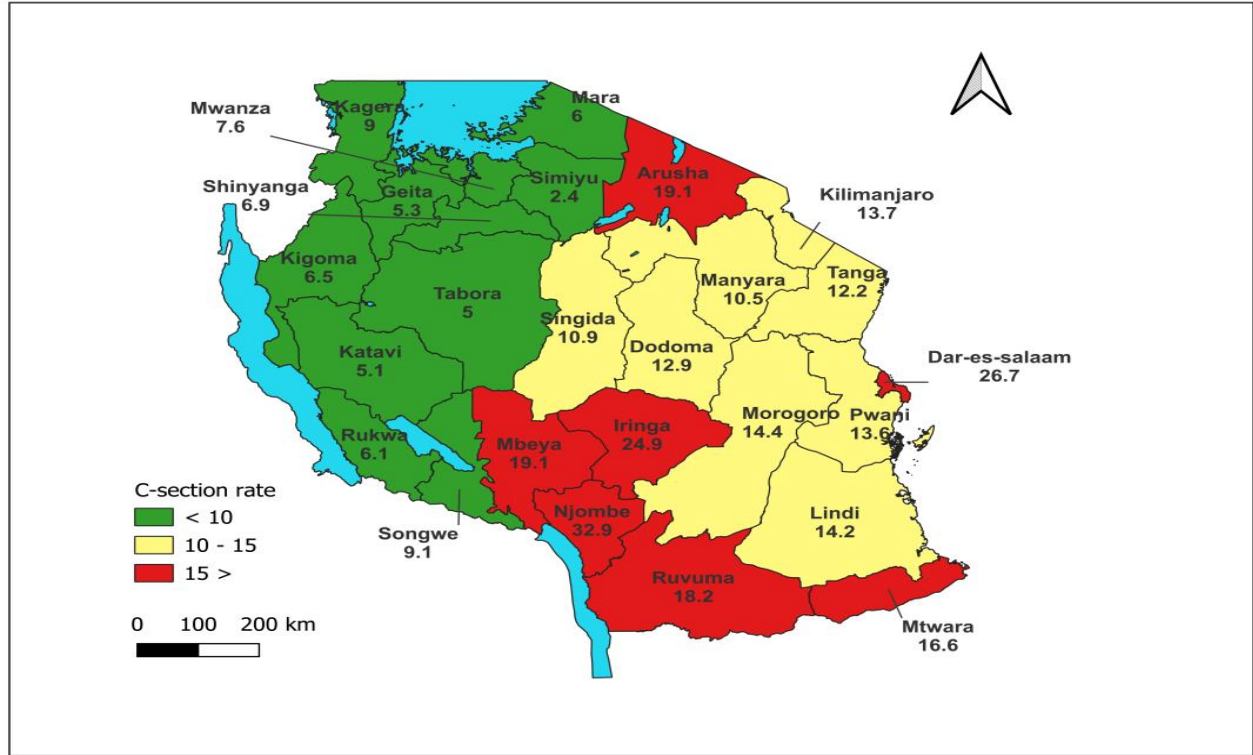

regions reported high CS delivery rates: Njombe (32.5%), Dar es Salaam (27.6%), and Iringa (27%), as depicted in Figure 22. While CS can be a critical and life-saving procedure, it can expose women and infants to unnecessary risks of short and long-term health complications if performed without medical necessity.

5.3. POSTNATAL SERVICES IN TANZANIA MAINLAND 2024

Postnatal care is a vital service for monitoring mothers after childbirth for up to 42 days. There has been a rising trend in mothers attending postnatal care services within 48 hours after delivery, with the data indicating an increase from 91.5% in 2023 to 94% in 2024, as illustrated in Figure 24.

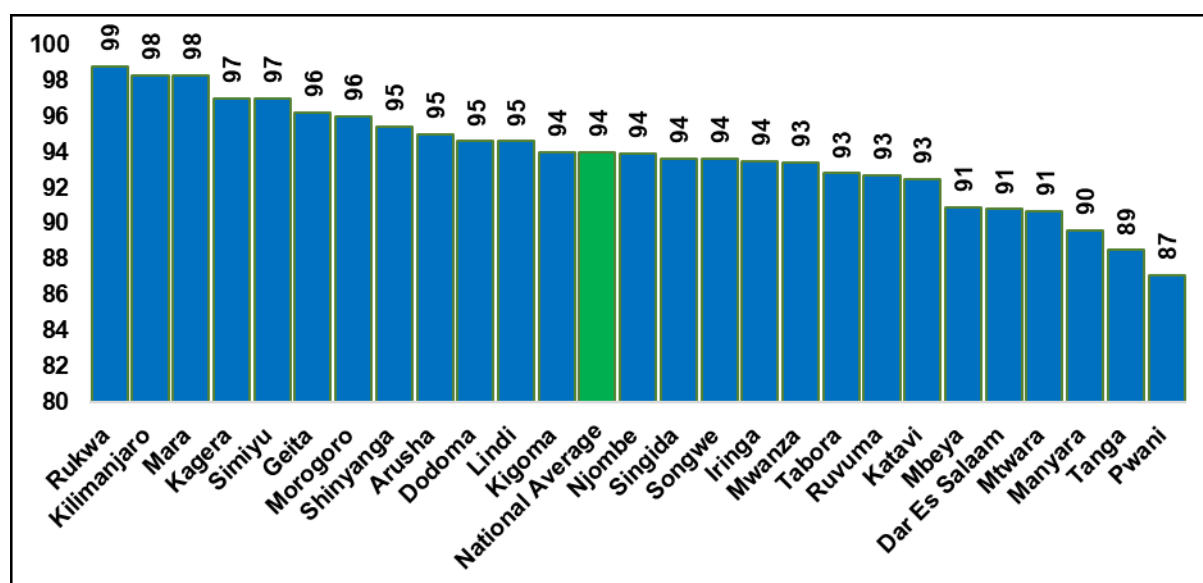

FIGURE 24: NATIONAL TREND OF POSTNATAL CARE MOTHERS WITHIN 48 HOURS IN 2024

Source: DHIS2

All regions have reported the coverage of Post Natal Care (PNC) mothers within 48 hours above the national coverage target of 80.3%. The leading regions are Rukwa (98.8%), Kilimanjaro (98.3%), Mara (98.3%), Kagera (97%) and Simiyu (97%). while the least region is Pwani (87.1%), Tanga (88.5%), and Manyara (89.6%), as seen in Figure 25.

FIGURE 25: COVERAGE OF POSTNATAL CARE MOTHERS WITHIN 48 HOURS IN TANZANIA BY REGION IN 2024

5.4. IMMUNIZATION

The immunization and Vaccine Development (IVD) program under Preventive Services Department under the Directorate of Preventive Services of the Ministry of Health. The IVD program is headed by the Program Manager and has six units namely Service Delivery and new vaccine introduction; Capacity building and Demand generation; Supply chain, Cold chain, and Logistics; Vaccine preventable disease surveillance; program management, Planning, and Administration and Monitoring and evaluation

5.4.1. IMMUNIZATION PERFORMANCE IN 2024

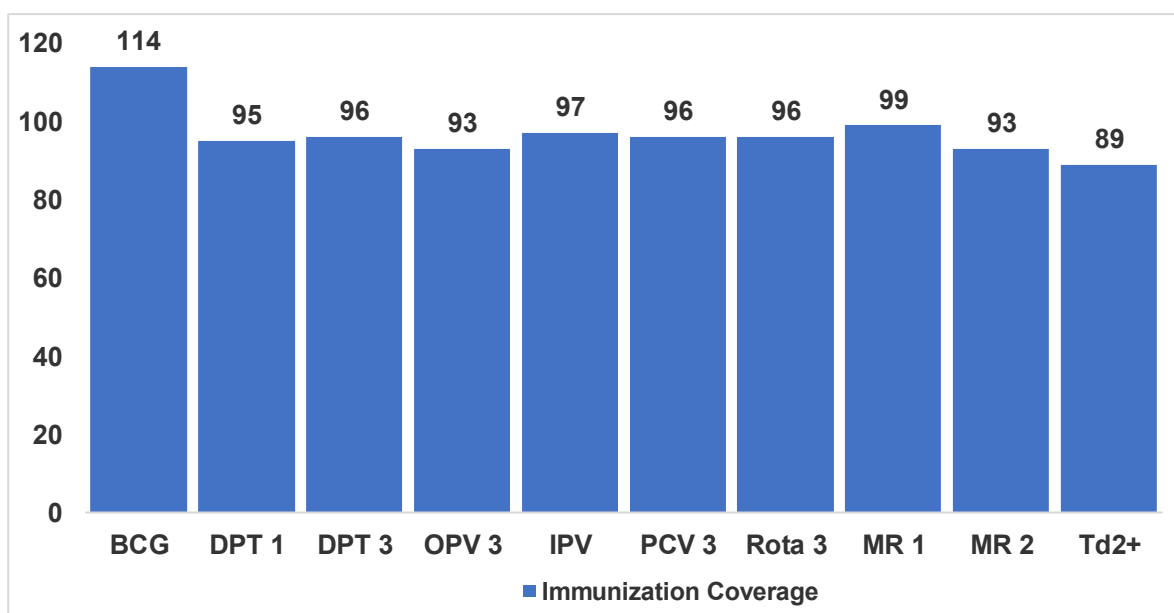

Tanzania continues to make significant progress toward achieving the goals outlined in the Immunization Agenda 2030 (IA 2030), demonstrating substantial improvements in immunization performance across various antigens in 2024. The National Immunization Program set ambitious targets, aiming to vaccinate 3,172,712 surviving infants and 5,138,338 girls aged 9 to 14 years with the HPV vaccine.

The program achieved remarkable results in 2024, with 3,060,371 children receiving the DTP-HepB-Hib third dose, corresponding to a 96% coverage rate. Additionally, 3,166,006 children were vaccinated with the MR first dose (representing 99.8% coverage), while 2,974,813 children received the MR second dose (94% coverage). The HPV vaccination surpassed the target, with 5,478,165 girls vaccinated, achieving 107% coverage. Notably, all other antigens reported coverage rates of above 90%, except for Td2+, which recorded 88% coverage. These impressive achievements reflect the continued efforts of the immunization program and its commitment to safeguarding public health.

However, there are limitations affecting the accuracy and quality of immunization data. One key challenge faced on 2024 immunization data is the lack of age disaggregation in the numerator in the current data collection tools, which prevents routine examination of whether children are vaccinated within the recommended age for scheduled vaccines or receive vaccinations later than intended. This limitation hampers accurate monitoring of adherence to vaccination schedules. Moreover, the reliance on paper-based data collection tools, such as tally sheets and registers, compromises data quality as these primary collection tools often encounters challenges during the transfer of data to monthly reporting tools. This process introduces errors and inconsistencies, affecting the accuracy of reported coverage rates.

To address these data-related challenges, the IVD program has implemented a new version of the monthly report form in the VIMS system which disaggregates data based on the age of the child receiving immunization services. These new forms will be starting January, 2025. The development and deployment of TImR child electronic register tool is also expected to significantly enhance data accuracy by facilitating age-disaggregated reporting and improving the consistency of data across all levels.

FIGURE 26: IMMUNIZATION COVERAGE OF SELECTED ANTIGENS - 2024

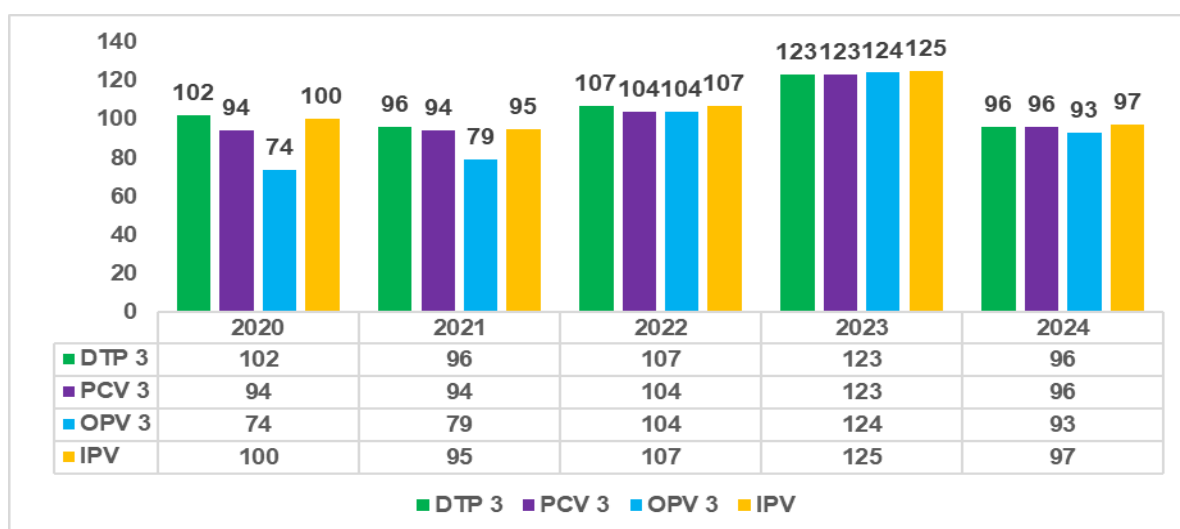

Source: VIMS Database 2024

5.4.2. TREND OF IMMUNIZATION COVERAGE OF ANTIGENS GIVEN AT THE SAME TIME

Overall, there was a significant decrease in the number of vaccines administered to children across all antigens in 2024. This decline is linked to improvements made in defining catchment areas, which were introduced after observing that vaccine coverage had exceeded 100% in previous years, as illustrated in Figure 27. For instance, the proportion of children receiving the bOPV vaccine rose from 104% in 2022 to 124% in 2023.

Additionally, the country implemented a national catch-up plan in 2023, conducting a series of periodic intensification store ach all under-vaccinated children below five years of age. In some districts, missed children above one year of age were included in routine data, which affected numerator and coverage data, resulting in figures exceeding 100%.

FIGURE 27: TREND OF IMMUNIZATION COVERAGE FOR VACCINE ANTIGENS GIVEN AT THE SAME SCHEDULE (2020-2024)

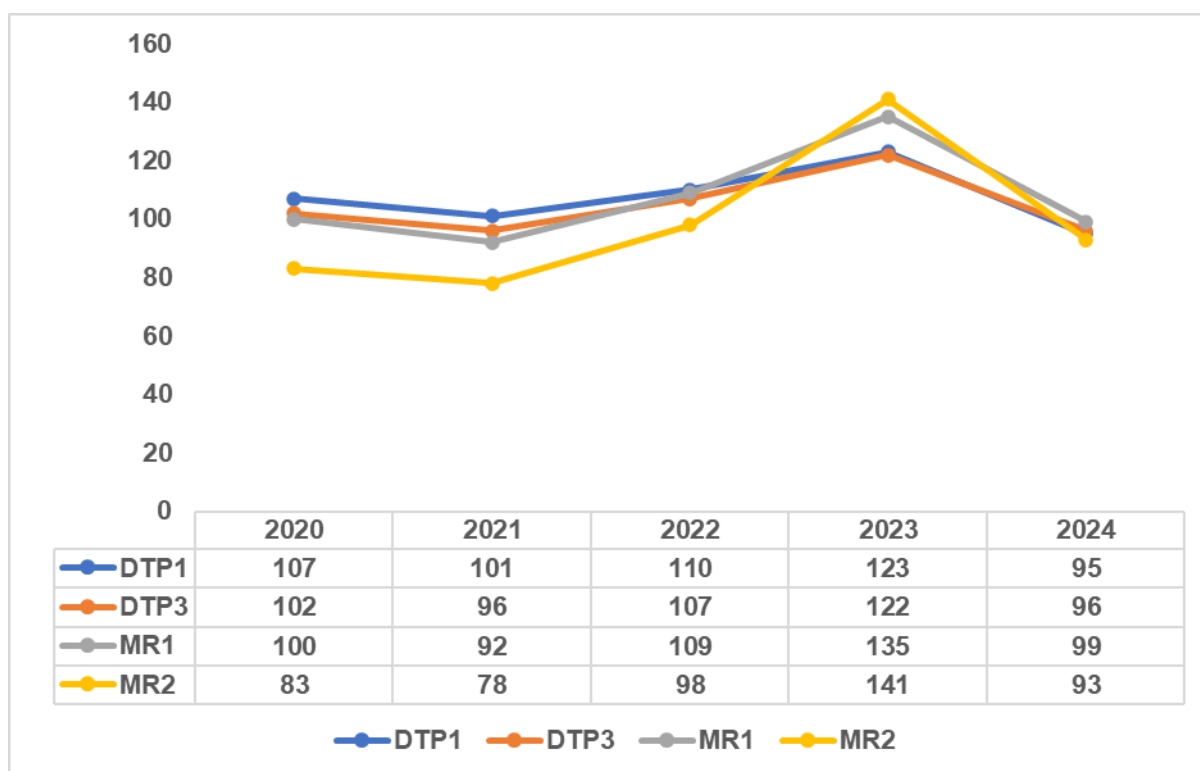

Source: VIMS Database 2020-2024

5.4.3. TREND OF DTP1, DTP3, MR1 AND MR2 COVERAGE FOR FIVE YEARS

From 2020 to 2023, all four vaccines showed steady improvement, with 2023 recording the highest coverage levels overall. However, in 2024, there was a noticeable drop in coverage across all vaccines. Despite this decline, the 2024 coverage remained above the lowest levels seen in earlier years, particularly for MR2. This change was influenced by the use of a more refined denominator, which was calculated based on data from different programs, especially the data from RCHS. This approach helped identify a more realistic factor, addressing the previous years' coverage rates that appeared to exceed 100%.

FIGURE 28: TREND OF DTP1, DTP3, MR1 & MR2 COVERAGE (2020–2024)

Source: VIMS Database 2020–2024

5.4.4. TREND OF DTP3 VACCINATION PERFORMANCE

In the 2024 reporting period, a total of 110 districts (56.4%) successfully achieved the target coverage of 95% or higher for the DTP-Hep B-Hib third dose. This reflects commendable efforts by immunization teams and local health authorities in the 110 districts, demonstrating robust vaccination outreach and service delivery. However, there are still notable gaps that require attention. Specifically, 26 districts reported coverage rates between 90% and 94%, indicating a need for targeted interventions to close the gap to 95%. Twenty-nine districts achieved coverage rates between 80% and 89%, suggesting moderate performance but room for improvement, and 30 districts reported coverage rates between 50% and 79%, highlighting significant challenges in reaching target populations and maintaining consistent vaccination services.

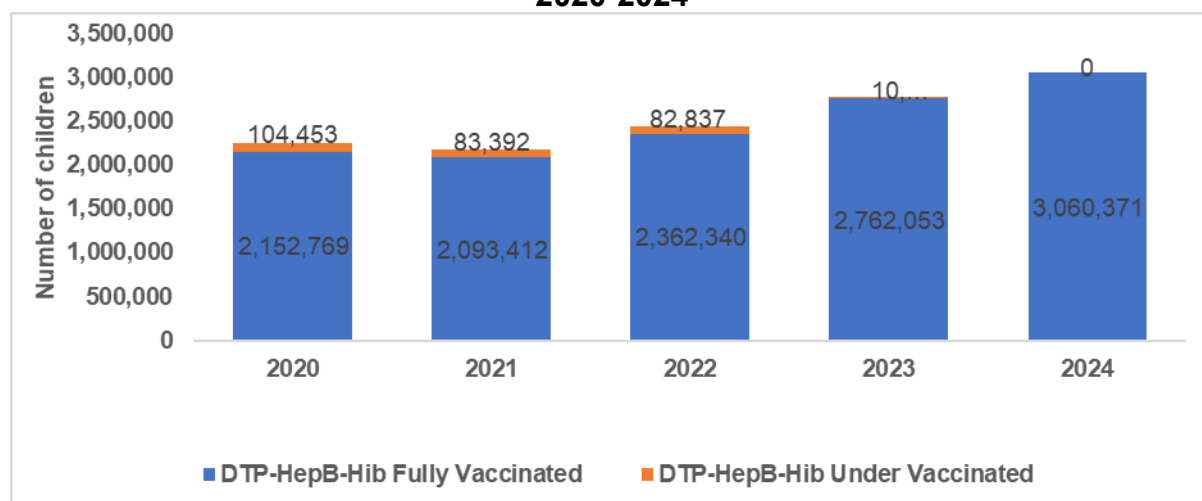

5.4.5. VACCINATED AND UNDER-VACCINATED STATUS DTP3 VACCINE (2020–2024)

The number of under-vaccinated children in Tanzania has shown a consistent downward trend over recent years, reflecting the success of targeted immunization efforts. In 2020, the number of under-vaccinated children stood at 104,453, which decreased to 83,392 in 2021. This positive trend continued in 2022, with the number further declining to 82,837, and in 2023, it dropped significantly to 10,053.

This remarkable progress can be attributed to the program's continuous efforts in conducting Periodic Intensification of Routine Immunization (PIRI) activities and

strengthening routine immunization services. As a result of these concerted efforts, no under-vaccinated children were recorded in 2024, marking a major milestone in the country's immunization program. Sustaining these achievements will require ongoing commitment to routine immunization, continued community engagement, and diligent monitoring to promptly address any emerging challenges.

FIGURE 29: VACCINATED AND UNDER-VACCINATED STATUS DPT VACCINE, 2020-2024

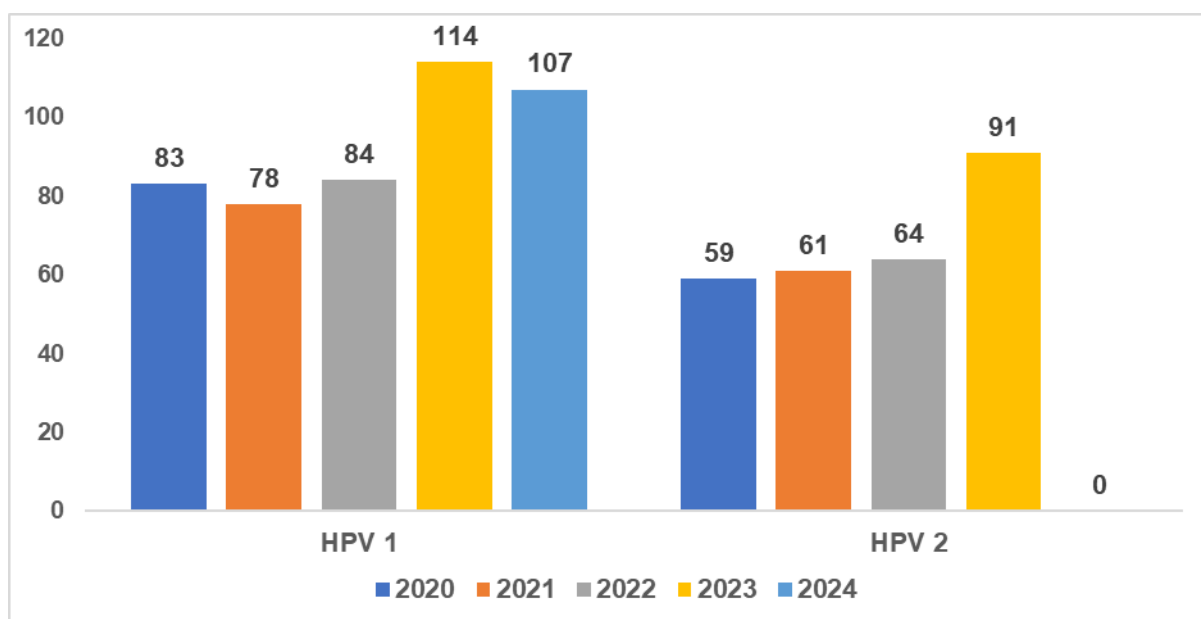

Source: VIMS Database 2020-2024

5.4.6. HPV VACCINES COVERAGE TRENDS

Figure 32 shows the percentage coverage of HPV1 and HPV2 vaccinations from 2020 to 2024. From 2020 to 2023, HPV1 coverage steadily increased, reaching a peak of 114% in 2023, which suggests some over-reporting or inclusion of older age groups. HPV2 coverage also improved, rising from 59% in 2020 to 91% in 2023, indicating strong progress in full vaccination rates.

In 2024, only HPV1 data is shown, with a coverage of 107%. This is because the vaccination program switched to a single-dose schedule, replacing the earlier two-dose regimen. As a result, HPV2 is no longer reported, and the focus is now on achieving high coverage for the single-dose HPV1 vaccine, as illustrated in Figure 30.

FIGURE 30: HPV VACCINE COVERAGE TREND (2020–2024)

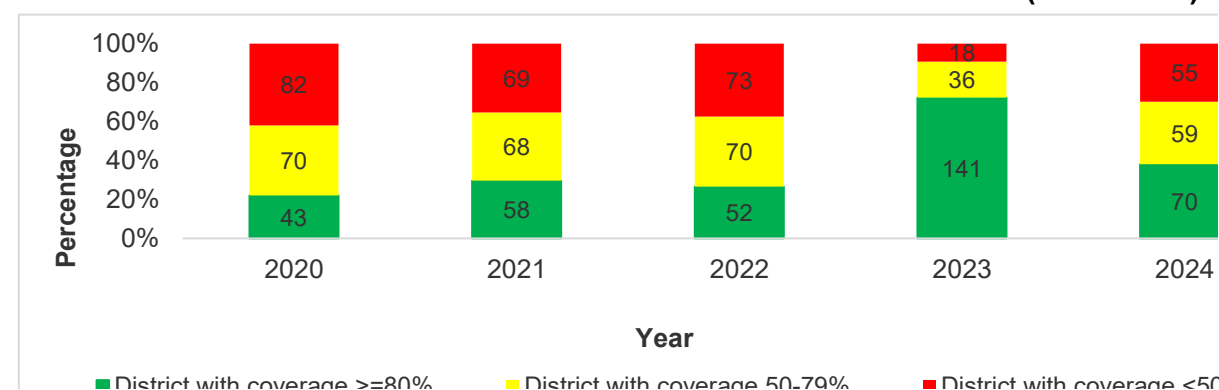

Source: VIMS Database 2020–2024

5.4.7. TREND OF HPV COUNCIL PERFORMANCE

Between 2020 and 2023, district coverage improved a lot. The number of districts with less than 50% coverage went down, while more districts reached 80% or higher. The best results were seen in 2023, with the most districts having high coverage and the fewest with low coverage. However, in 2024, the progress slipped fewer districts had high coverage, and more moved back to medium and low levels. This shows that more effort is needed to keep up the improvements made by 2023, as portrayed in Figure 31.

FIGURE 31: DISTRIBUTION OF DISTRICTS PERFORMANCE HPV2 (2020-2024)

Source: VIMS Database 2019–2023

5.4.8. VACCINE PREVENTABLE DISEASES (VPD) SURVEILLANCE

In the country, Polio surveillance, Measles-rubella surveillance, as well as Neonatal and Maternal Tetanus surveillance are integrated at regional and council level, in line with the current advocacy for integration of Polio surveillance with other VPD surveillance.

5.8.9. TRENDS IN ACUTE FLACID PARALYSIS DETECTION RATE

At the national level, Acute Flaccid Paralysis (AFP) detection has been maintained above the target of 2.0/100,000 under fifteen years population for the five years progressively from 2020-2024 as portrayed in Figure 32.

FIGURE 32: TRENDS IN AFP DETECTION RATE

Source: EPI info case detected Database 2020–2024

5.5. NEW BORN

5.5.1. LIVE BIRTH, STILL BIRTH AND UNDERWEIGHT <2.5KG IN TANZANIA MAINLAND

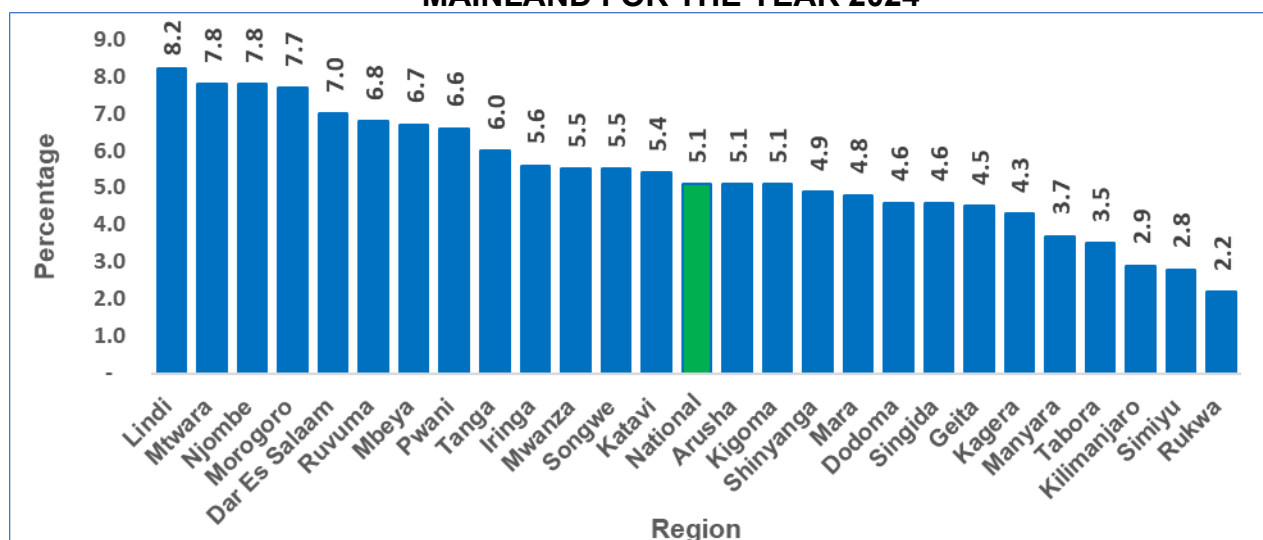

This section outlines the newborn situation in Tanzania Mainland. In 2024, Live births increased from 2,148,365 in 2023 to 2,258,033 in 2024 to equivalent to 5.1%. The percentage of newborns weighing less than 2.5 kilograms decreased slightly from 5.5% (93,262) in 2023 to 5.1% (92,502). According to the World Health Organization (WHO), infants weighing less than 2500 grams (2.5 kilograms) are classified as "low birth weight" regardless of gestational age. Regions with the most favorable performance regarding low-birth weight deliveries in 2024 include Rukwa (2.2%), Simiyu (2.8%), Kilimanjaro (2.9%), Tabora (3.5%), Manyara (3.7%), Kagera (4.3%) and Geita (4.5%), while those with lower performance are Lindi (8.2%), Njombe and Mtwara (7.8%) each, Morogoro (7.7%), Dar es Salaam (7.0%) and Ruvuma (6.8%), as illustrated in Figure 33.

The national target for low-birth-weight deliveries (weighing less than 2.5 kilograms) aims to be under 4% of total deliveries by 2025 (outlined in One Plan III). In 2024, 131 out of 184 councils (71.2%) recorded a high number of underweight deliveries, exceeding 4% of total deliveries, while 53 out of 184 councils (28.8%) reported good performance with underweight births below 2.5 kilograms in the same period.

The percentage of stillbirths remained the same 0.7% for both in 2023 and 2024, as depicted in Figure 36. In 2024, Regions with the lowest number of stillbirth deliveries include Kilimanjaro (0.2%), Kagera, Dodoma, Songwe and Ruvuma (0.3%) each, and Rukwa, Simiyu and Mara (0.4%) each, whereas regions with the highest number of stillbirth deliveries include Dar es Salaam (1.4%), Katavi and Mtwara (1.1%) each, Lindi (1.0%) and Tabora (0.9%).

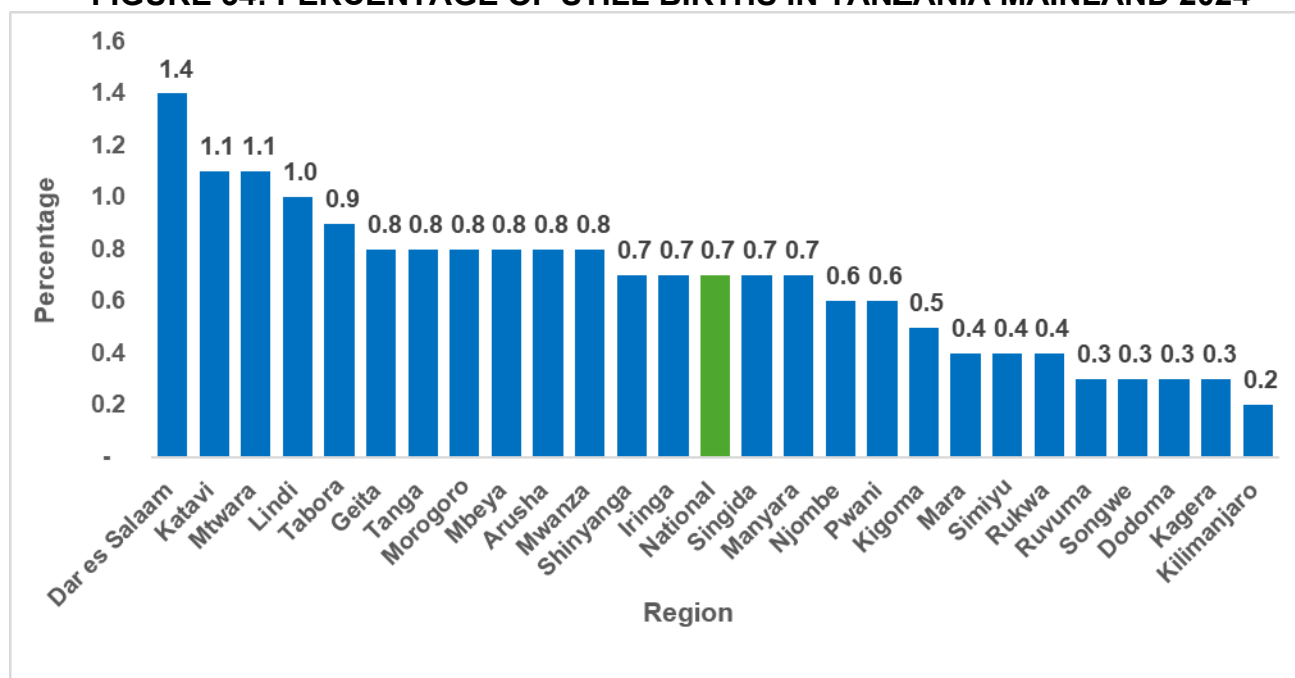

The countrywide goal is to have stillbirths less than 15 per 1000 live births by 2025 (according to One Plan III). In 2024, 165 out of 184 councils (90%) met this target, reporting stillbirth rates of less than 15 per 1,000 live births. However, 19 out of 184 councils (10%) had stillbirth rates higher than 15 per 1,000 live births in the same year.

5.6. FAMILY PLANNING SERVICES IN TANZANIA MAINLAND

5.6.1. FAMILY PLANNING UPTAKE

There has been an increase in the annual utilization of modern family planning methods from 2020 to 2024. In 2024, the estimated population of women aged 15-49 years was 15,487,565 of whom 9,491,378 (61.3%) were utilizing family planning services. Out of these, 4,498,913 (47.4%) were continuing clients, while 4,992,465 (52.6%) were newly registered during the year. The average national utilization rate for new acceptors of modern family planning was 52.6% in 2024, hitting the national target of 42% set for 2025 (as outlined in One Plan III), as depicted in Figure 35.

Family planning outreach services continued to be provided across all regions in Tanzania to reach clients in underserved and marginalized areas. The national coverage of family planning services through outreach was 20.4% in 2024.

**FIGURE 35: PERCENTAGE OF FAMILY PLANNING NEW ACCEPTORS
TANZANIA MAINLAND 2020 TO 2024**

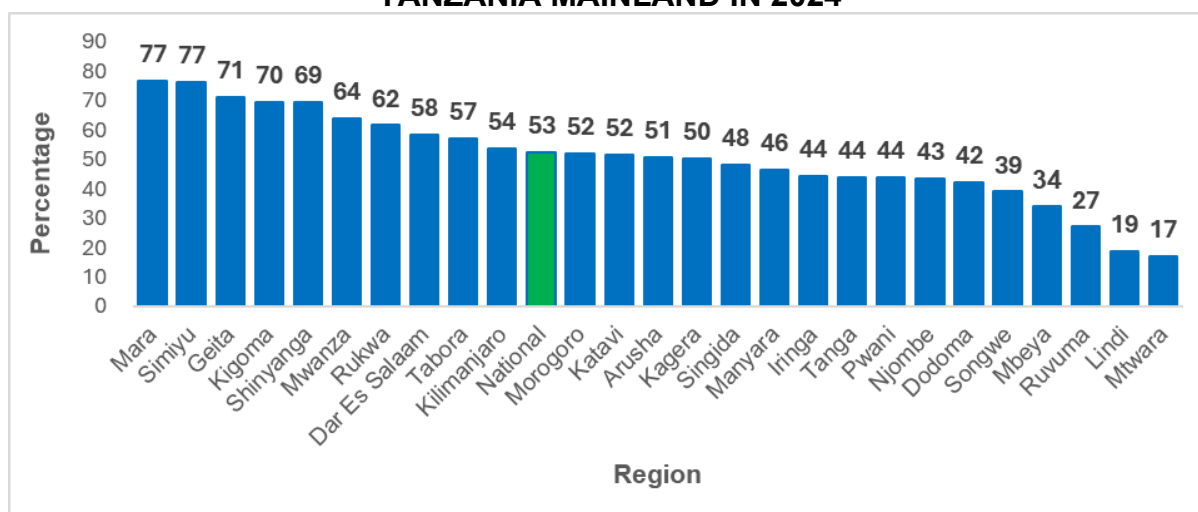

Source: DHIS2

5.6.2. NEW ACCEPTORS FOR MODERN FAMILY PLANNING

The trend in modern family planning for new acceptors has been fluctuating over the past five years as depicted in Figure 35 above. Regions with higher percentage of modern contraception for new acceptors included Mara (77%), Simiyu (77%), Geita (71%), and Kigoma (70%). Ten regions reported utilization of modern family planning services above the national average of 53%, while sixteen regions had less coverage. The regions with the lowest coverage were Mtwara (17%), Lindi (19%), Ruvuma (27%), and Mbeya (34%).

Overall, the percentage of modern contraception for new acceptors increased from 52.1% in 2023 to 52.6% in 2024. Seventy-six (76) councils had coverage above the national average of 52.6%, while 108 councils fell below it.

**FIGURE 36: COVERAGE OF MODERN CONTRACEPTION NEW ACCEPTORS
TANZANIA MAINLAND IN 2024**

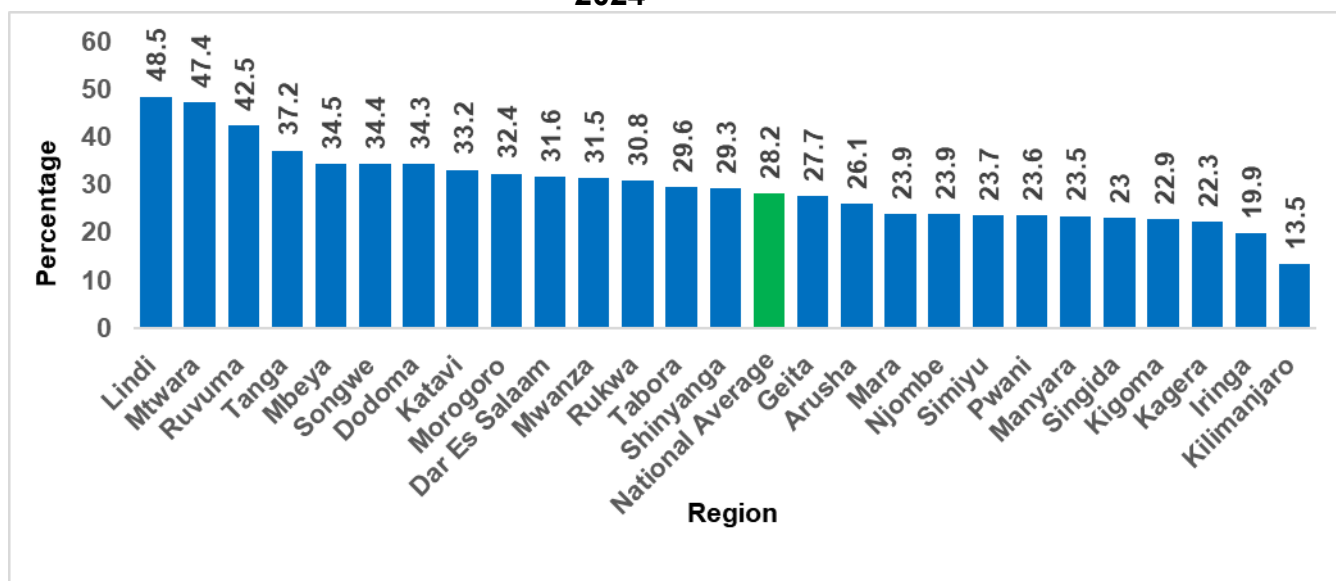

Source: DHIS2

5.6.3. ADOLESCENTS FAMILY PLANNING COVERAGE

Adolescents across all regions in Tanzania have access to family planning services, yet the overall coverage of these services for adolescents remains very low. Fourteen regions have higher coverage rates than the national average of 28.2%, while 12 regions fall below it. Regions with high coverage include Lindi (48.5%), Mtwara (47.4%), and Ruvuma (42.5%). Conversely, regions with low coverage are Kilimanjaro (13.5%), Iringa (19.9%), and Kagera (22.3%) as portrayed in Figure 37.

One hundred and two (102) councils reported coverage rates for new family planning among adolescents above the national average of 28.2%, while 82 councils report rates below this average.

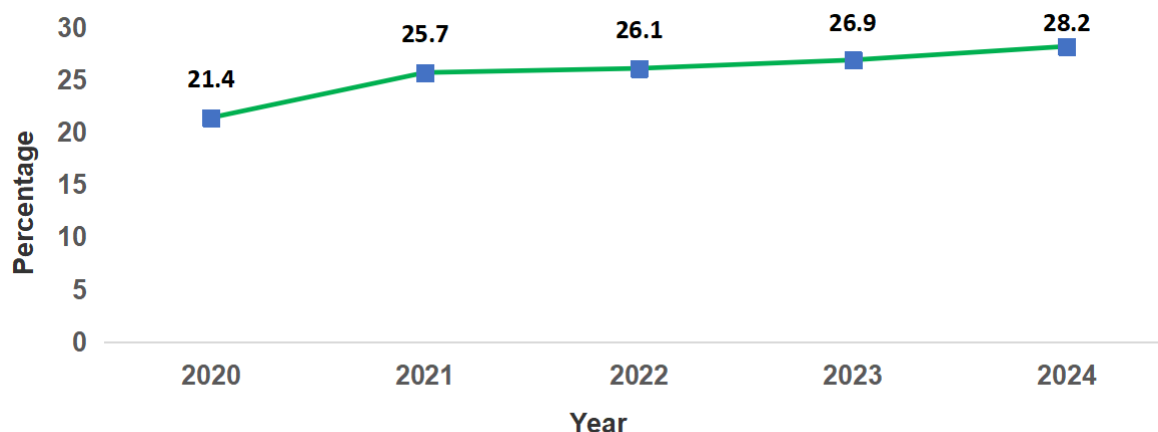

**FIGURE 37: ADOLESCENTS FAMILY PLANNING COVERAGE BY REGIONS
2024**

Source: DHIS2 2024

The trend in modern family planning coverage for adolescents increasing consistently over the five-year period from 21.4% in 2020 to 28.2% in 2024 as illustrated in Figure 38.

**FIGURE 38: ADOLESCENTS RECEIVED FAMILY PLANNING METHODS
TANZANIA MAINLAND 2020 TO 2024**

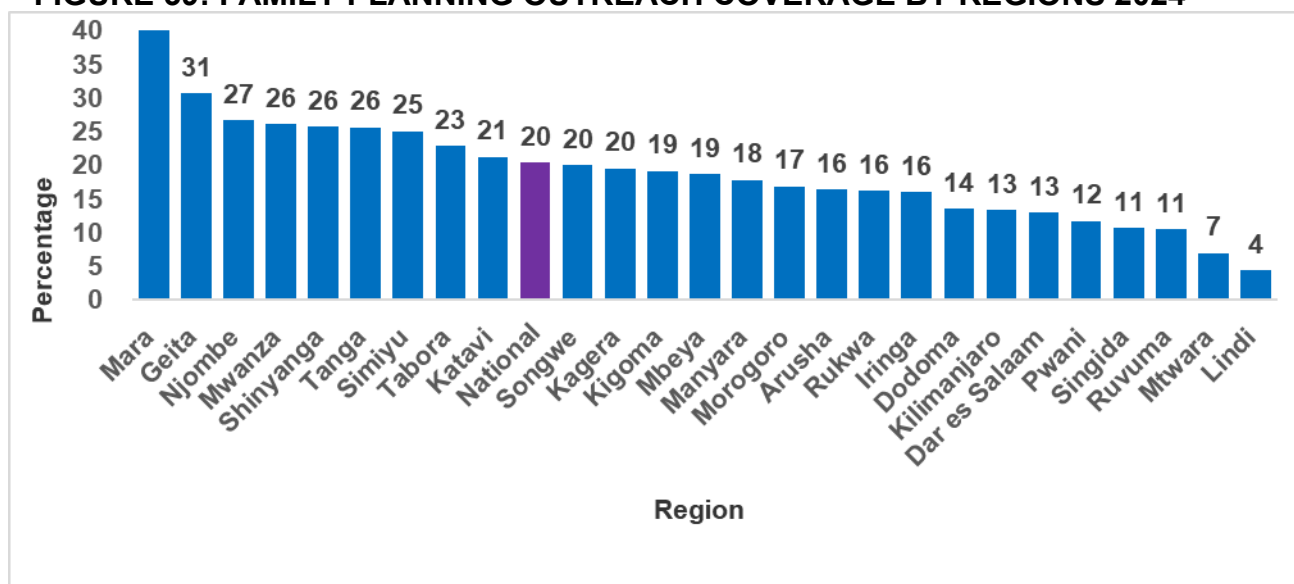

Source: DHIS2 2024

5.6.4. FAMILY PLANNING OUTREACH SERVICES

Family planning outreach services were consistently provided across all regions in Tanzania to extend services to underserved and marginalized areas. Nine regions exceeded the national average of 20.4% for outreach family planning services, while 17 regions fell below it. Regions with a high proportion of clients receiving family planning services through outreach included Mara (43%), Geita (30.7%), and Njombe (26.7%). Conversely, Mtwara region had the lowest proportion, serving only 4.4% of clients, followed by Mtwara (7%), and Ruvuma (10.6%) as illustrated in Figure 39.

Seventy-four (74) councils reported coverage rates for outreach family planning above the national average of 20.4%, while 110 councils reported rates below this average.

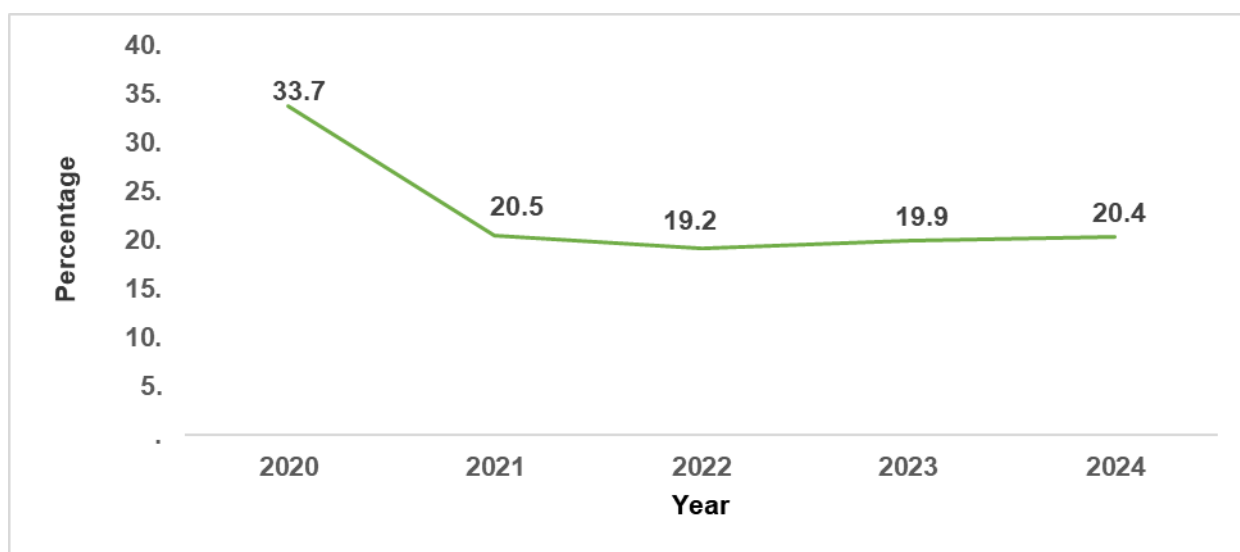

FIGURE 39: FAMILY PLANNING OUTREACH COVERAGE BY REGIONS 2024

Source: DHIS2 2024

The trend in outreach family planning coverage remained consistently around 20% over the five-year period from 2020 to 2024 as depicted in Figure 40.

FIGURE 40: OUTREACH FAMILY PLANNING CLIENTS TANZANIA MAINLAND 2020 TO 2024

Source: DHIS2 2024

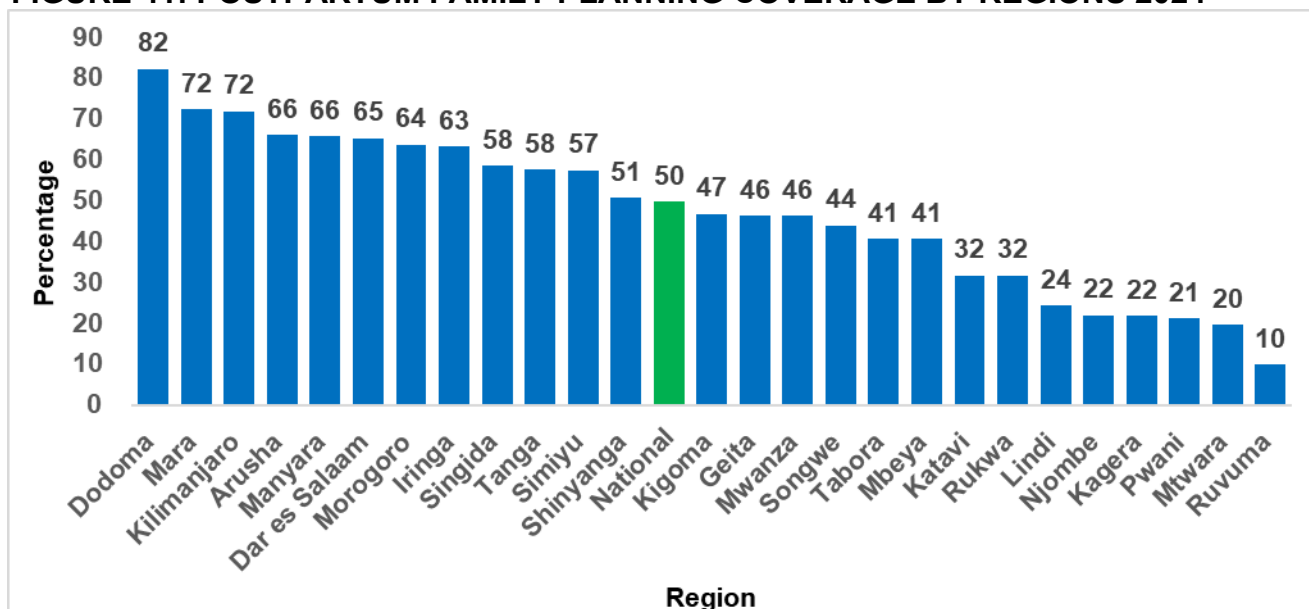

5.6.5. POST-PARTUM FAMILY PLANNING UPTAKE

Postpartum Family Planning (PPFP) services continued to be provided across all regions in Tanzania, primarily at the labour wards. Twelve (12) regions exceeded the national average of 49.6% for PPFP coverage, while 14 regions fell below this standard. Regions with a high number of clients receiving PPFP services included Dodoma (82.2%), Mara (72.4%), Kilimanjaro (71.8%), and Arusha (66.1%). On the other hand, Ruvuma region had the lowest number of clients receiving family

planning services through PPFP (9.8%), followed by Mtwara (19.6%), Pwani (21.4%), and Kagera (21.7%).

Eighty-eight (88) councils reported PPFP coverage rates above the national average of 42%, while 96 councils reported rates below this average, as illustrated in Table 30.

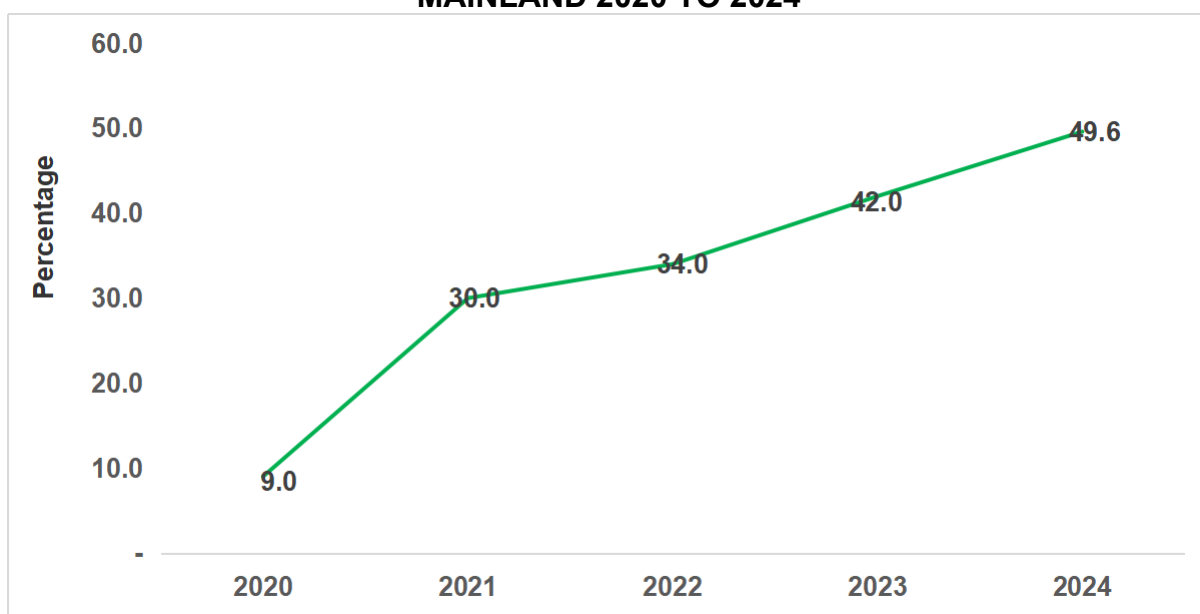

FIGURE 41: POSTPARTUM FAMILY PLANNING COVERAGE BY REGIONS 2024

Source: DHIS2 2024

The trend in PPFP coverage shows a gradual increase from 2020 through 2024. It was notably low in 2020 (9%), followed by a significant rise to 30% in 2021. Thereafter, it gradually increased to 34% in 2022 and reached 49.6% in 2024, as depicted in Figure 42.

5.7. REPRODUCTIVE CANCERS SERVICES

Under secondary prevention, the implementation of the reproductive cancer program in Tanzania focuses primarily on cervical and breast cancer services, including screening and treatment of precancerous lesions. Currently, out of 1,562 health facilities providing reproductive and Child Health services (Hospitals and Health Centres) in Tanzania Mainland, 997 facilities offer cervical cancer services, representing 63.8% of facilities providing such services. The national target is to screen 70% of women using Visual Inspection with Acetic Acid (VIA). As of the end of 2024, the Ministry continued to provide Comprehensive Cervical Cancer Prevention (CECAP) services to 1362 health facilities, having procured 312 cryotherapy/thermo instruments and 28 LEEP machines and distributed them to designated facilities. Additionally, the Ministry trained 600 service providers in screening and treating cervical cancer using cryotherapy/thermo and LEEP machines. However, the treatment rates remain low compared to the recommended target of 80%.

Cervical cancer screening among women aged 30-49 decreased from 70.8% in 2020 to 38.3% in 2024 although a high decrease has been observed, this performance is still above the set target of 30% (One Plan III 2025) for this age group, which is at higher risk of cervical cancer. Moreover, the percentage of women screened positive for cervical cancer exhibited a proportional decrease from 3.6% in 2020 to 2.8% in 2024. The proportion of women receiving cancer treatment decreased from 67% in 2020 to 46.8% in 2024, falling short of the national target of 80% across the years as shown in Figure 46. These improvements are attributed to the expansion of sites equipped with cryotherapy and LEEP machines.

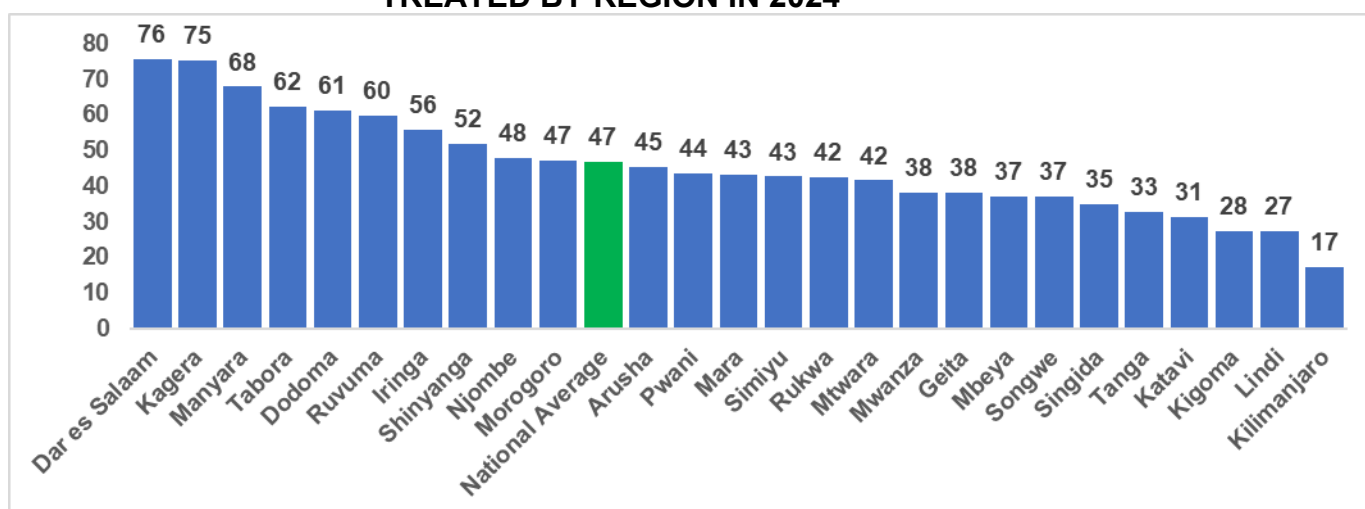

FIGURE 43: PROPORTION OF WOMEN SCREENED FOR CERVICAL (VIA), SCREENED VIA+ AND TREATED FOR CERVICAL CANCER 2020 - 2024

Source DHIS2

In 2024, there was a decrease in the number of women treated for cancer across all regions. However, no any regions met or exceeded the national target of 80%. Although Dar es Salaam had the highest treatment rate, reaching 75.6%, followed by Kagera with 75.2%, Manyara with 67.9%, Tabora with 62.3%, and Dodoma with 61.2%. The regions with the lowest treatment rates were Kilimanjaro with 17.2%, Lindi with 27.3%, Kigoma 27.5% and Katavi 31.3% and Tanga 32.3. Despite this variation, all thirteen regions fell short of the national target for 2024, as illustrated in Figure 44.

5.8. GENDER BASED VIOLENCE AND VIOLENCE AGAINST CHILDREN IN TANZANIA MAINLAND

Gender Based Violence (GBV) and Violence Against Children (VAC) continue to be a public health challenge in Tanzania. According to the 2021/22 Tanzania Demographic and Health Survey (TDHS), 27% of women aged 15–49 reported experiencing physical violence, and 12% reported experiencing sexual violence. Data from DHIS2 show that reported GBV/VAC cases increased from 253,441 in 2022 to 266,410 in 2023 and increased to 274,004 in 2024.

The percentage of survivors reporting within 72 hours for accessing timely medical and psychosocial support remains below the national target of 60%. In 2024, only 31.3% of cases were reported within 72 hours which is an increase compared to 30.2% in 2023. Moreover, only 21 out of 184 councils (11.4%) met the national target, leaving 88.6% below standard. The trends in sexual violence among females show a declining from 7% in 2023 to 3% in 2024, while among males, there is a slight decrease from 7% to 5.9%. Physical violence among females dropped from 37% to 17.9%, whereas for males, it remained at 38% in 2023 and 36.3% in 2024. Among VAC cases, the number of neglected children continued to rise, from 9,754 in 2023 to 9,769 in 2024, while children living in risk environments increased from 8,771 in 2023 to 8,857 in 2024. Region comparison, Dar es Salaam recorded the highest number of GBV/VAC 21,726, Shinyanga 19,759 and Geita 7,734 in 2024.

CHAPTER SIX

6.0. HIV PROGRAM DATA

6.1. PEOPLE ENROLLED IN HIV CARE AND TREATMENT SERVICES

Tanzania continues to make commendable progress toward controlling the HIV epidemic, as evidenced by data from the Tanzania HIV Impact Survey (THIS) 2022–2023. National HIV prevalence among individuals aged 15–49 years has declined consistently over the past two decades, from 7.0% in 2003/04 to 5.1% in 2011/12, 4.7% in 2016/17, and reaching 4.4% in 2022/23. This declining trend is a direct reflection of sustained national investments in HIV prevention, care, and treatment.

According to UNAIDS 2024 estimates, approximately 1.7 million people in Tanzania are living with HIV (PLHIV). By December 2024, the program data indicate that 92% of PLHIV were aware of their HIV-positive status, of whom 99% were on antiretroviral therapy (ART), and 98% of those on treatment were virally suppressed. While ART coverage and viral load suppression have improved further in 2024, the proportion of individuals aware of their status declined by five percentage points compared to 2023. This signals a growing need to intensify HIV case identification and testing services, especially for underdiagnosed groups such as men, adolescents, and key populations.

Overall, these results confirm that Tanzania has effectively achieved the UNAIDS 95-95-95 target, particularly in treatment and viral suppression, while highlighting priority areas to enhance HIV diagnosis coverage for sustained epidemic control by 2030.

As of December 2024, a cumulative total of 1,551,648 individuals had been enrolled in HIV care services across the country. This figure reflects a decline compared to 1,645,860 clients reported in 2023. The reduction due to data quality improvements, patient deduplication, and biometric identification deployment. Despite this, the program has sustained a high ART coverage rate, with 1,529,561 clients (98.6%) actively receiving Antiretroviral Therapy (ART) by the end of 2024.

Regional disparities in enrolment persist, with the number of clients enrolled in HIV care ranging from 16,951 in Manyara Region to 193,143 in Dar es Salaam. Women aged 15 years and above continue to represent the majority of clients in care, with enrolment levels twice as high as those of men in the same age group, underscoring persistent gender-based differences in health-seeking behavior and HIV testing uptake. The availability of ART services has steadily expanded. The number of health facilities providing ART increased from 7,396 in 2023 to 7,805 in 2024, comprising 3,659 Care and Treatment Clinics (CTCs) and 4,146 PMTCT Option B+ facilities. The distribution of these facilities varies by region, from 68 CTC sites in Katavi to 266 in Mwanza, and from 7 Option B+ sites in Dar es Salaam to 412 in Tabora.

In line with the 2015 WHO Consolidated Guidelines, Tanzania continues to implement the "Treat All" policy, which recommends initiating ART regardless of CD4 count or clinical stage. This approach has contributed to the rapid expansion of HIV

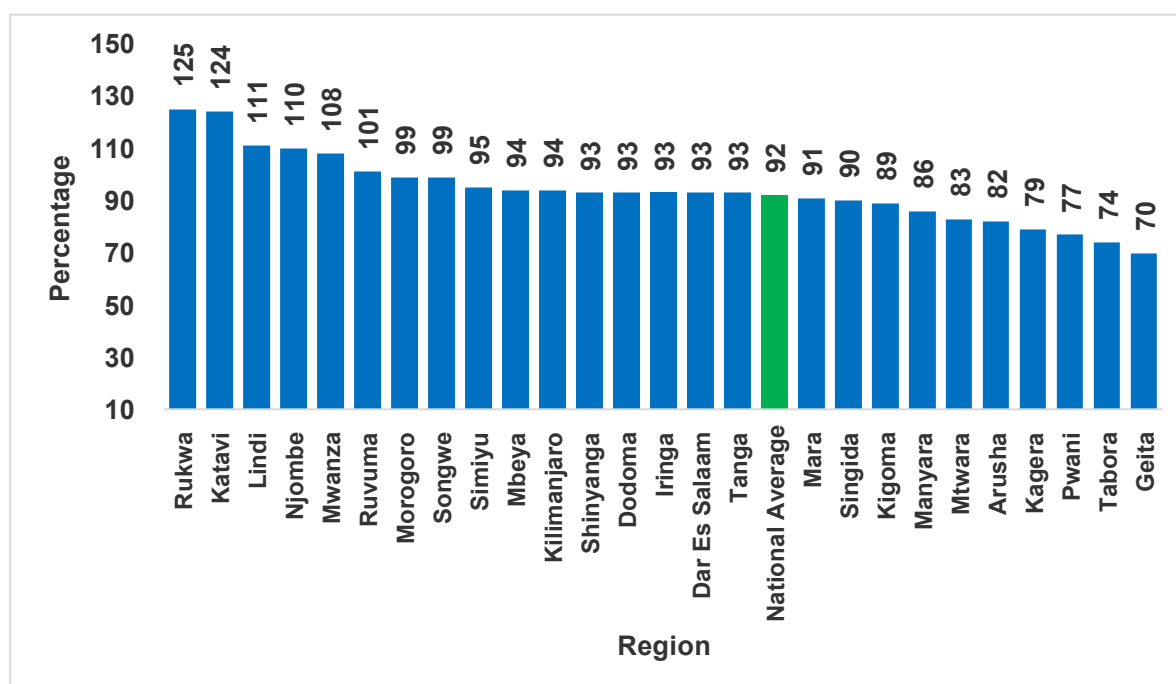

treatment services and improved health outcomes for PLHIV. To support long-term retention and adherence, the program has also adopted the Service Delivery Model, enabling three- to six-month ART refills for stable clients.

To ensure sustainability and quality of care, the HIV program remains focused on:

- Enhancing logistics and commodity security,
- Improving data quality and reporting systems,
- Scaling staff training on ART management, and
- Promoting community awareness on HIV testing, early diagnosis, and retention in care.

These coordinated interventions are critical for maintaining the gains in ART coverage and mitigating risks such as HIV drug resistance and loss to follow-up, especially among under-represented groups like children, adolescents, and key populations.

6.2. HIV CASCADE IN ART CARE AND TREATMENT PROGRAM

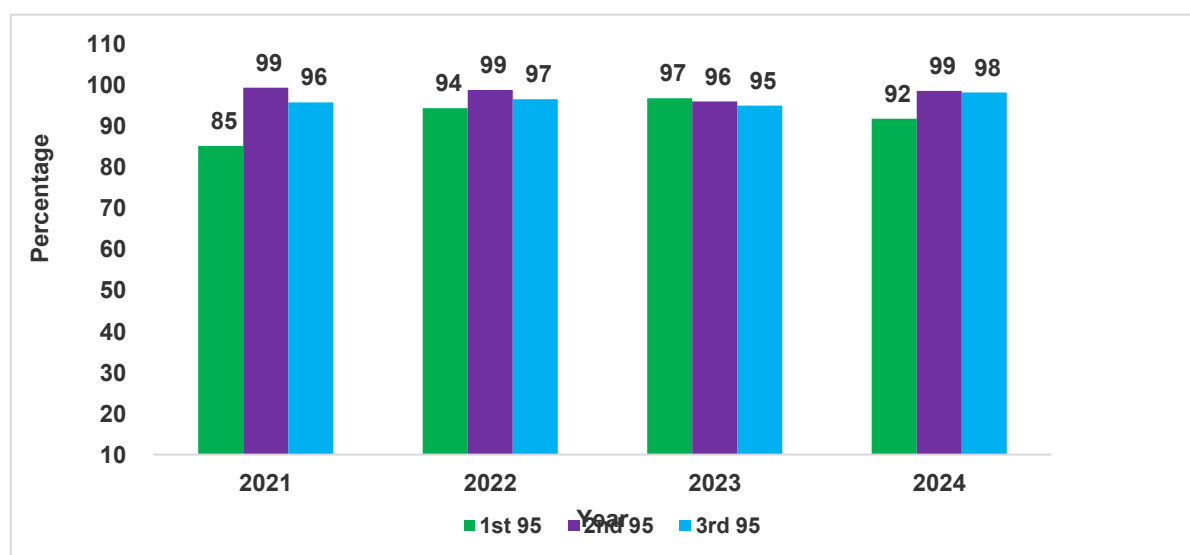

By December 2024, an estimated 1,551,648 people living with HIV (PLHIV) had been enrolled in HIV care and treatment services, representing 92% of the national HIV burden. This enrolment rate serves as a proxy for the proportion of PLHIV who are aware of their HIV status, the first “95” target of the UNAIDS 95-95-95 goals.

Among those enrolled in care, 1,529,561 individuals (99%) had been initiated or were actively receiving Antiretroviral Therapy (ART), indicating strong performance on the second “95”; access to treatment among diagnosed individuals.

In terms of viral load monitoring, a total of 1,437,788 clients on ART (94%) received HIV viral load testing between January and December 2024. Among them, 1,409,032 (98%) were found to be virally suppressed, surpassing the third “95” target and improving from a 95% viral suppression rate in 2023. This progress underscores the success of treatment adherence and service quality efforts across the continuum of care. The trend in ART coverage over recent years reflects consistent program performance; 1,520,589 clients in 2021, 1,612,512 clients in 2022, 1,579,886 clients in 2023 and 1,551,648 clients in 2024.

Although there has been a slight reduction in ART coverage since 2022, possibly due to data cleaning, patient deduplication, deployment and the use of biometric fingerprint identification to all CTC sites, the proportional performance on all three 95 targets has improved. This confirms that Tanzania is firmly on track in its efforts to control the HIV epidemic, aligning with the UNAIDS Global AIDS Strategy 2021–2026.

CHAPTER SEVEN

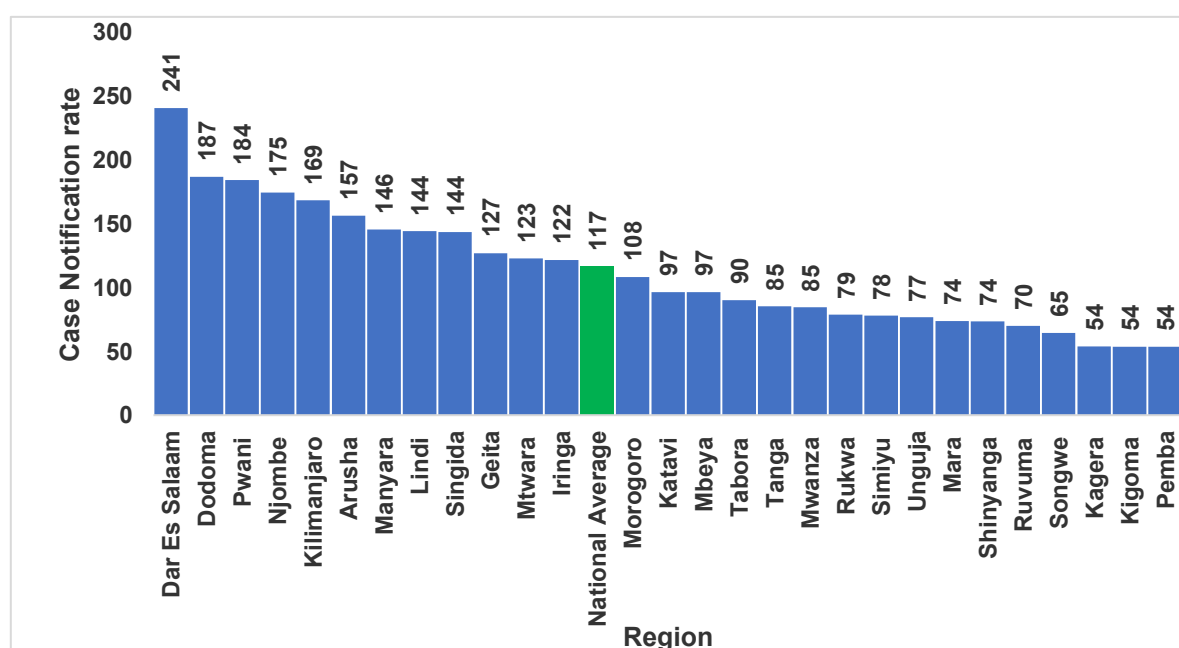

7.0. TUBERCULOSIS AND LEPROSY

7.1. TUBERCULOSIS

7.1.1. TUBERCULOSIS CASE NOTIFICATION RATE

In 2024, a total of 75,924 new and relapse TB cases were reported, resulting in a Case Notification Rate (CNR) of 117 cases per 100,000 population. This figure is lower than both the target of 151/100,000 and the previous year's rate of 147/100,000. Regions such as Dar es Salaam, Dodoma, Pwani, Njombe, and Kilimanjaro are among the eight regions with a TB case notification rate above the national average. Conversely, Kigoma, Kagera, Songwe, Ruvuma, Shinyanga and Mara are regions with the lowest CNR in Tanzania Mainland. Figure 47 illustrates the TB case notification rates across regions.

Source: DHIS2

7.1.2. COLLABORATIVE TB/HIV SERVICES

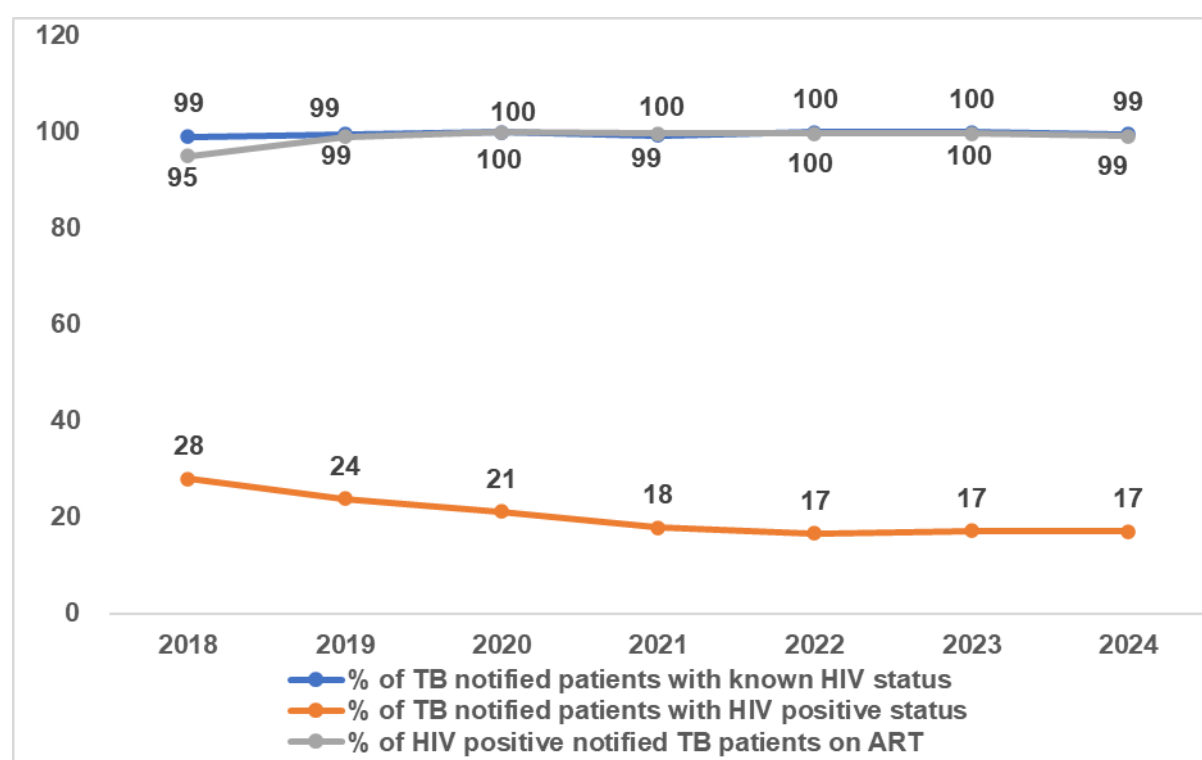

In 2024, a total of 75,469 (99%) new and relapse TB cases were notified with recorded HIV test results, which is consistent with the figures from the past five years. The national target is to test 100% of TB-diagnosed patients for HIV. Among those tested for HIV, 17% (12,467) of TB cases were found to be co-infected with HIV. The rate of co-infection has steadily decreased since 2018 (31%). Additionally, 99% (12,361) of co-infected TB patients were on ART during TB treatment. Figures 48

summarize the proportion and trend of TB/HIV indicators in the country from 2018 to 2024.

HIV testing and ART uptake rates are higher across all regions, with the lowest rates being 98% and 96%, respectively. Figures 51 and 52 show the proportion of TB patients with known HIV status and the percentage of HIV-positive TB patients started or continued on ART during TB treatment.

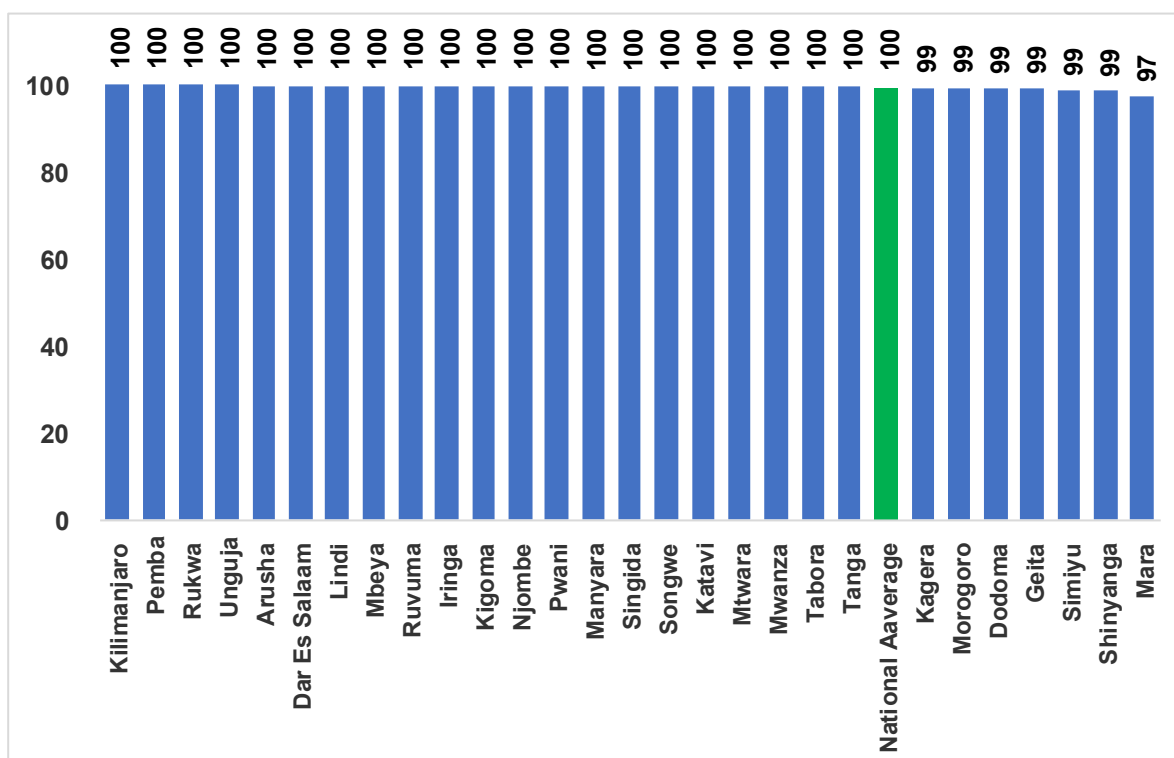

Figure 53 illustrates the improvement in Collaborative TB-HIV services activities, reflected in the performance of clients tested for HIV and those co-infected being placed on ART, as well as the steady decrease in the co-infection rate.

7.1.3. TUBERCULOSIS TREATMENT OUTCOME FOR CASES NOTIFIED IN 2023 (NEW AND RELAPSE TB CASES)

Analysis of the TB cohort notified in 2023 reveals an overall treatment success rate of 96% among new and relapse TB cases. However, 2,675 cases equivalent to 4.3% of the total registered TB cases died, while 0.1% failed treatment. Additionally, 1.2% were lost to follow-up during treatment. The regions of Kagera, Dodoma, Ruvuma, Manyara, and Kilimanjaro exhibited the highest treatment success rates, while Songwe, Kigoma, Mara, Iringa, and Lindi had the lowest rates, as depicted in Figure 52.

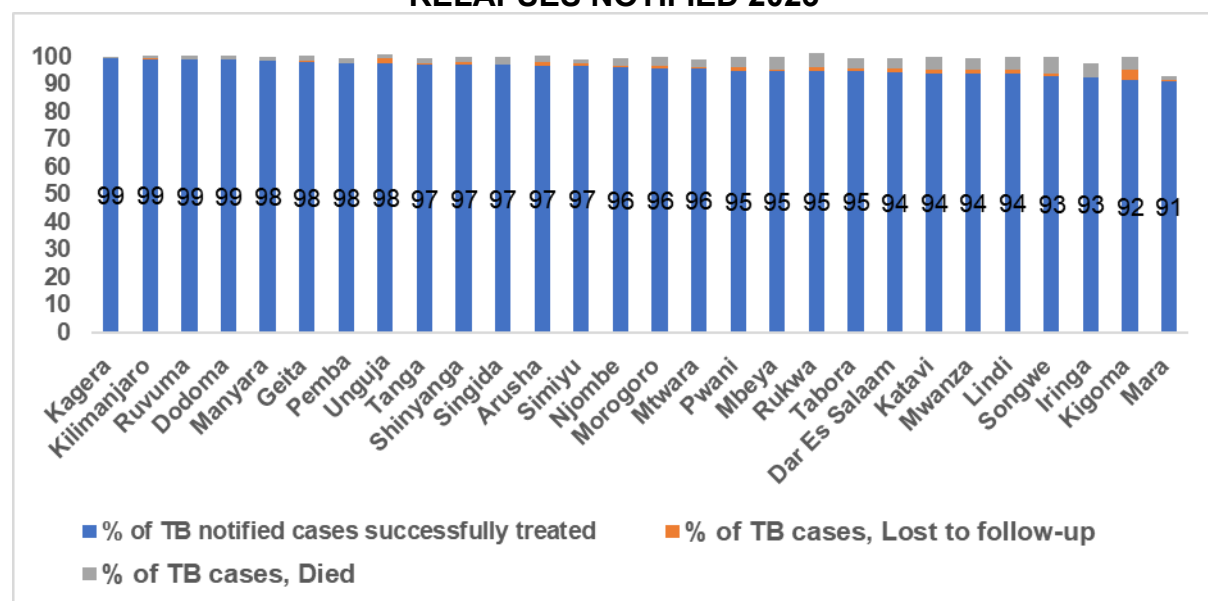

The TB treatment success rate varied among different patient groups, with the lowest rate observed in by previously treated TB patients (92%) and HIV-positive TB patients (93%) as shown in figure 51.

FIGURE 52: TUBERCULOSIS TREATMENT OF ALL FORMS OF TB NEW AND RELAPSES NOTIFIED 2023

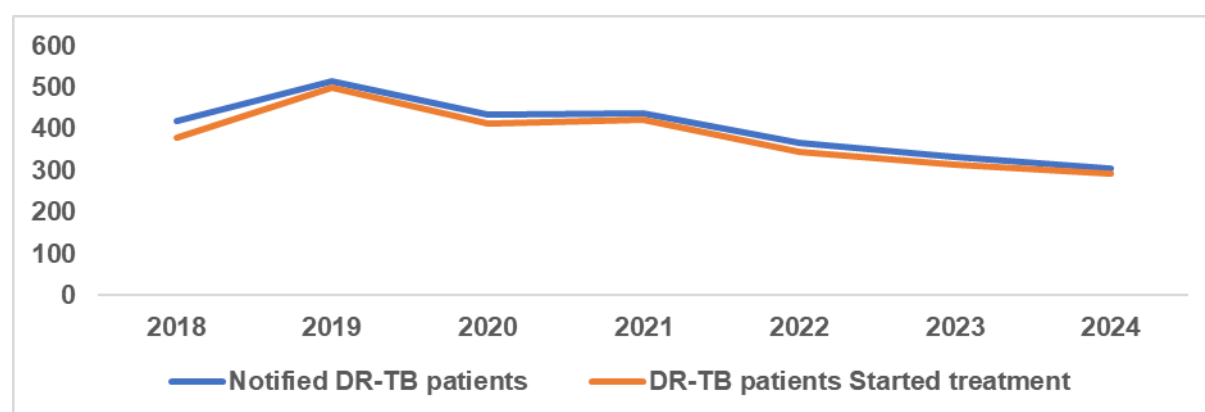

Source: DHIS2

7.1.4. PROGRAMATIC MANAGEMENT OF DRUG-RESISTANT TUBERCULOSIS (PMDT)

7.1.4.1. NOTIFICATION AND ENROLLMENT TO TREATMENT

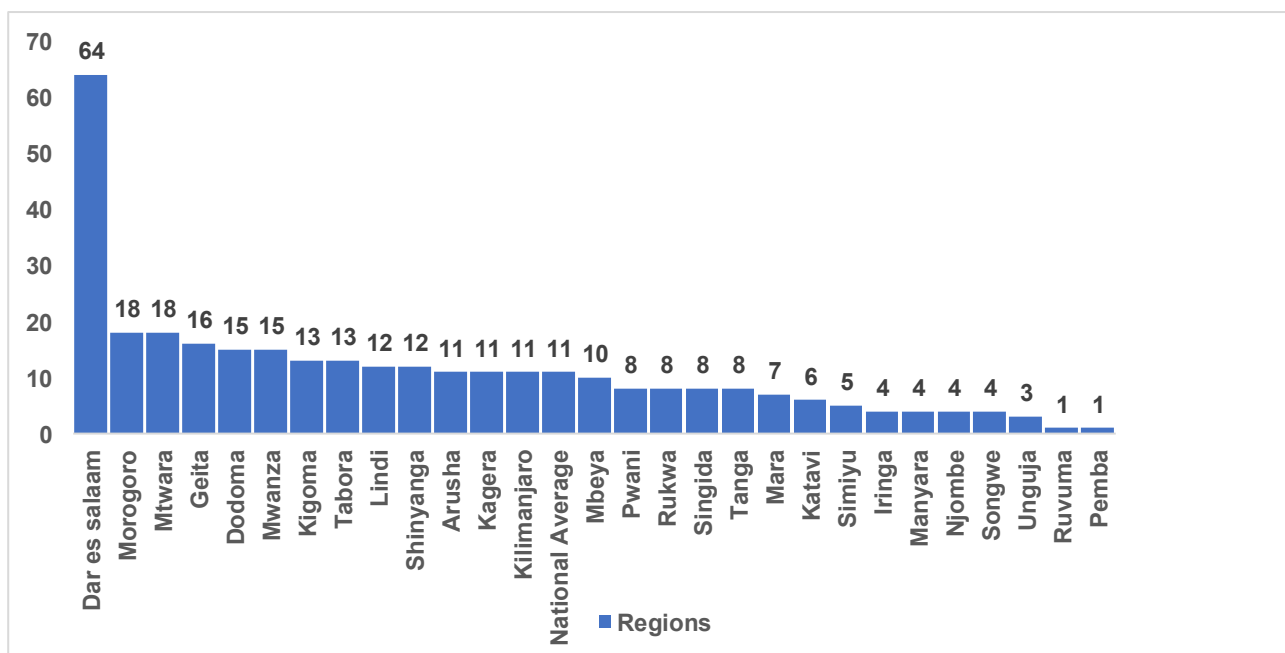

In 2024, a total of 306 RR/MDR-TB patients were notified, of which 292 (95%) started DR-TB treatment. Notably the notification of DR-TB cases has shown a declining trend since 2018, as depicted in Figure 53. Efforts are underway to enhance the detection of DR-TB cases, as evidenced by the increase in Drug Susceptibility Testing (DST) coverage among notified TB cases, both new and retreatments. Among the regions, Dar es Salaam accounted for 21% of all cases, followed by Morogoro, Mtwara, Geita, and Dodoma, while Njombe, Manyara, Songwe, Iringa, Simiyu and Ruvuma reported the fewest cases.

7.2. LEPROSY

7.2.1. NOTIFICATION OF LEPROSY CASES

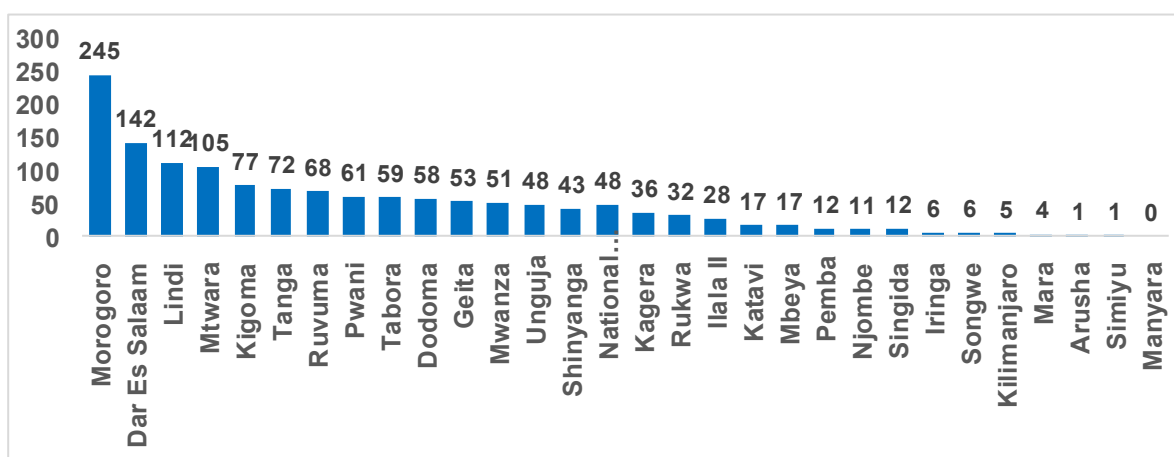

Tanzania is one of the priority countries for leprosy, consistently reporting over 1,000 cases each year. In 2024, a total of 1,255 new Leprosy cases were notified, corresponding to a notification rate of 19.1 per 1,000,000 people, as illustrated in Figure 55. Morogoro region reported the highest number of cases (245), followed by Dar es Salaam (142), Lindi (112), Mtwara (105), and Kigoma (77). In contrast, the regions with the fewest reported cases were Kilimanjaro (0), Manyara (0), Simiyu (1), Arusha (1), Mara (4), and Tanga (5).

CHAPTER EIGHT

8.0. ENVIRONMENTAL HEALTH AND SANITATION

8.1. PERFORMANCE OF ENVIRONMENTAL HEALTH AND SANITATION IN TANZANIA MAINLAND IN 2024

INTRODUCTION

Environmental health and sanitation are vital components of public health that examine the interaction between people and their environment. This discipline focuses on a number of challenges that have a direct influence on human health, including infrastructural problems, pollution, and access to clean drinking water. It includes necessities like stable climate, clean air, safe drinking water, enough shelter, good sanitation, and air pollution management.

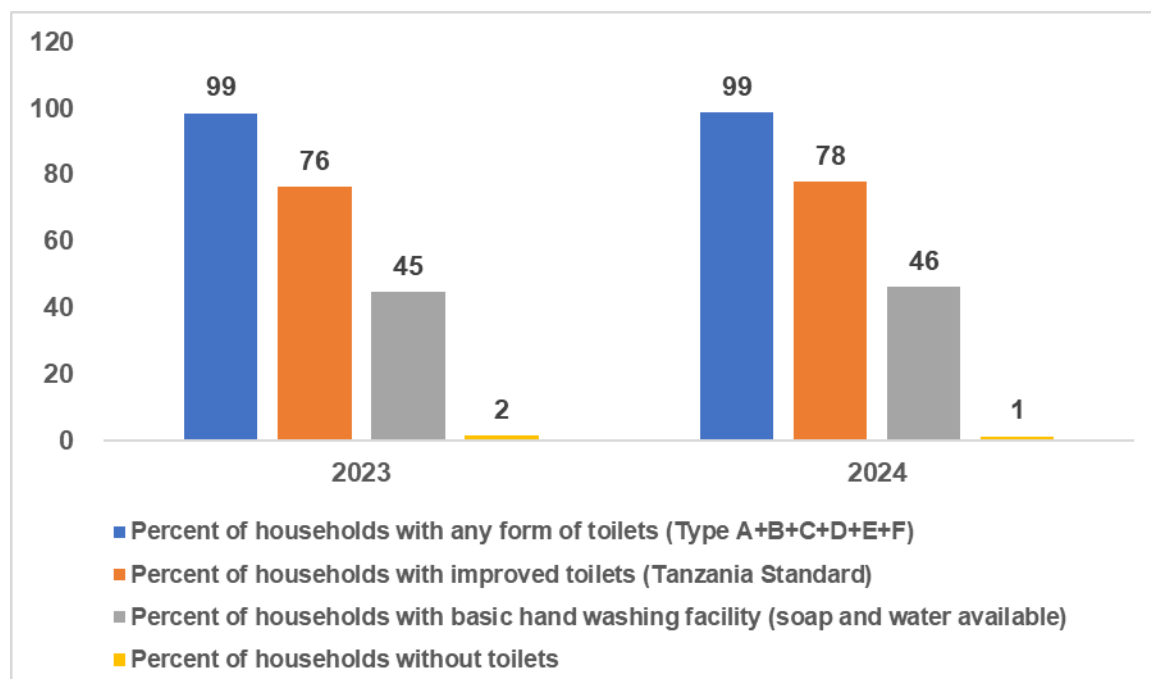

The ongoing climate change issue poses serious dangers to the sustainability of the Health Sector; the emergence of public illnesses has highlighted the significance of improved hygiene and sanitation standards. Millions of school-age children are disproportionately impacted by inadequate hygienic infrastructure, which contributes to the spread of illnesses within communities. Communities in resource-constrained nations like Tanzania frequently deal with serious environmental health issues, such as cholera, dengue fever, and malaria.

8.2. NATIONAL COVERAGE OF SANITATION AND HYGIENE

According to the National Bureau of Statistics (NBS) census data from 2022, Tanzania has a total of 13,916,924 households. The National Sanitation Management Information System (NSMIS) (www.nsmis.moh.go.tz) reported that in 2023, 98.5% of households had access to basic latrines, a figure that increased slightly to 98.7% in 2024, representing a one-year achievement of only 0.2%. Conversely, the proportion of households with improved latrines increased from 76.4% in 2023 to 77.9% in 2024.

Access to handwashing facilities at the household level also improved from 44.7% in 2023 to 46.2% in 2024. Handwashing is crucial for controlling many communicable infections. The percentage of households with no latrine decreased slightly from 1.5% in 2023 to 1.3% in 2024, indicating a reduction in households practicing open defecation (OD). The national target is to achieve zero coverage of OD by 2030. The safe management of fecal waste at the household level steadily increased from 34.12% to 36.13% in 2023 and 2024, respectively.

FIGURE 57: A COMPARISON OF PERCENTAGE OF HOUSEHOLD WITH ACCESS TO BASIC LATRINES, IMPROVED LATRINE, NO LATRINE AND HAND WASH IN TANZANIA MAINLAND FOR 2023 AND 2024

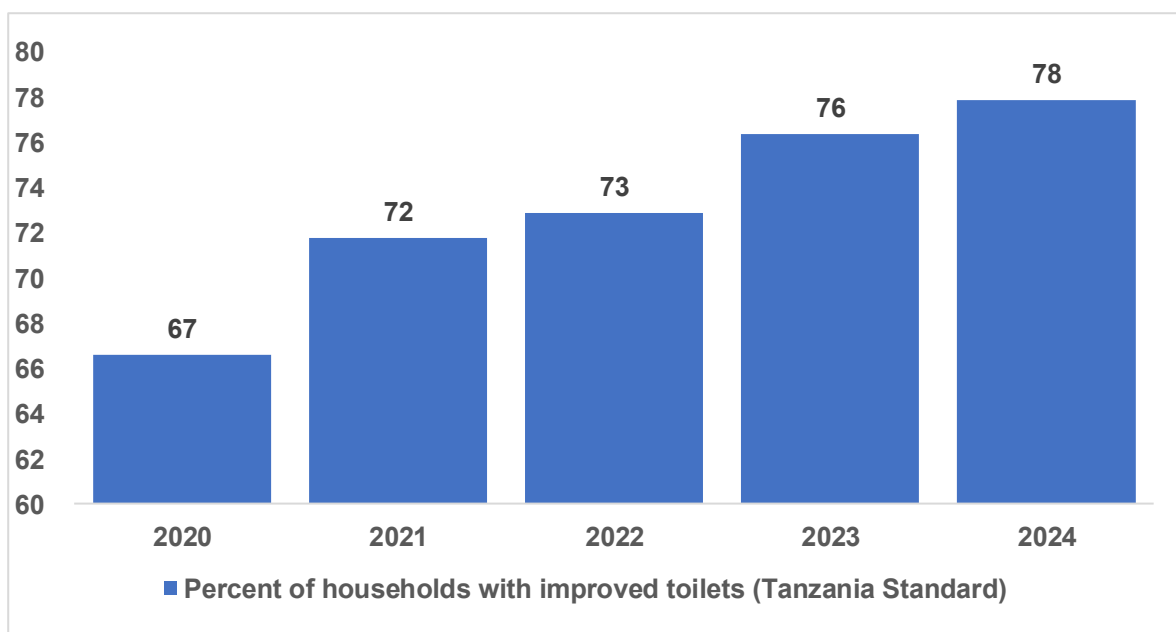

Source: NSMIS, June 2023 – June 2024

8.3. TREND OF HOUSEHOLDS WITH IMPROVED LATRINE FOR FIVE YEARS IN TANZANIA MAINLAND FROM 2020 TO 2024

Improved toilets have a positive impact on the quality of life. They not only enhance people's well-being but also bring benefits beyond merely reducing infectious diseases. Proper sanitation facilities, such as toilets and latrines, promote health by enabling individuals to dispose of waste appropriately, thereby preventing environmental contamination and reducing risks to themselves and their neighbors. The most commonly reported benefit of latrine use is improved health, followed by enhanced safety and security. Households with latrines are less likely to practice open defecation. Many communicable diseases affecting Tanzania are attributed to inadequate or lack of latrines at the household level. For example, regions with low latrine coverage are often highly affected by diseases like cholera, diarrhea, and helminth infections. The trend of improved latrine usage over the past five years shows an increase from 66.6% in 2020 to 77.9% in 2024 (Figure 58).

FIGURE 58: TREND OF HOUSEHOLDS WITH IMPROVED LATRINE FOR FIVE YEARS IN TANZANIA MAINLAND FOR 2020 – 2024

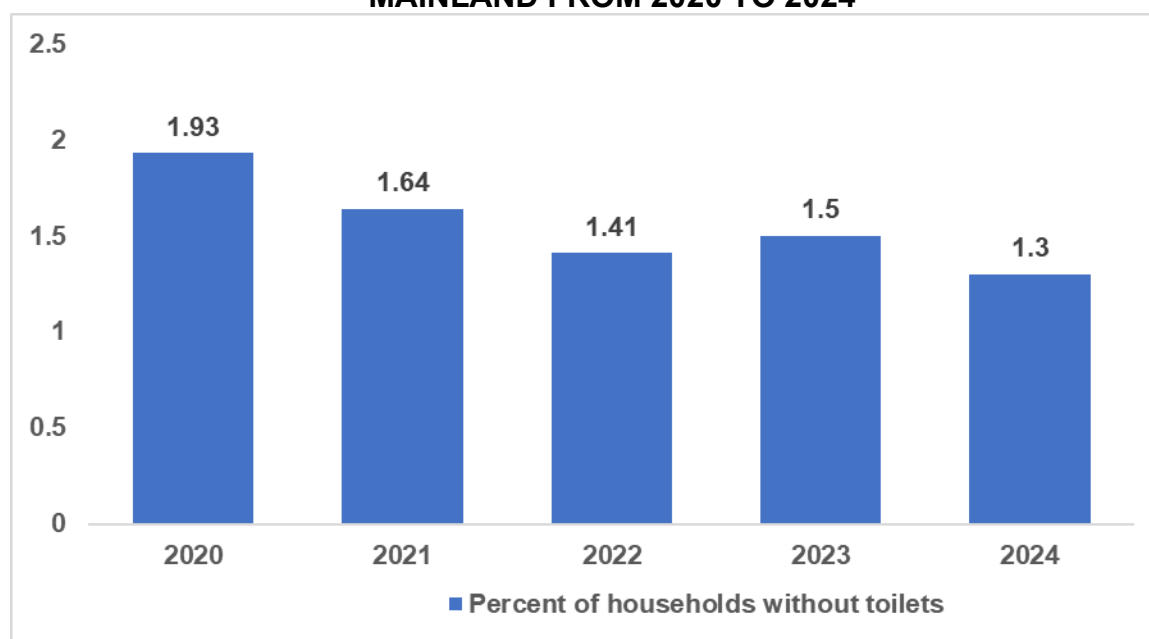

Source: MoH NSMIS, 2020 – 2024

8.4. TREND OF HOUSEHOLDS WITH NO LATRINE IN TANZANIA MAINLAND FROM 2020 TO 2024

Measuring households with access to latrines is essential to understand the broader picture of those who lack latrines and therefore resort to open defecation, posing a risk for disease transmission. Figure 59 illustrates significant progress in reducing the number of households without latrines, declining from 1.9% in 2020 to 1.3% in 2024.

FIGURE 59: PERCENTAGE OF HOUSEHOLDS WITH NO LATRINE IN TANZANIA MAINLAND FROM 2020 TO 2024

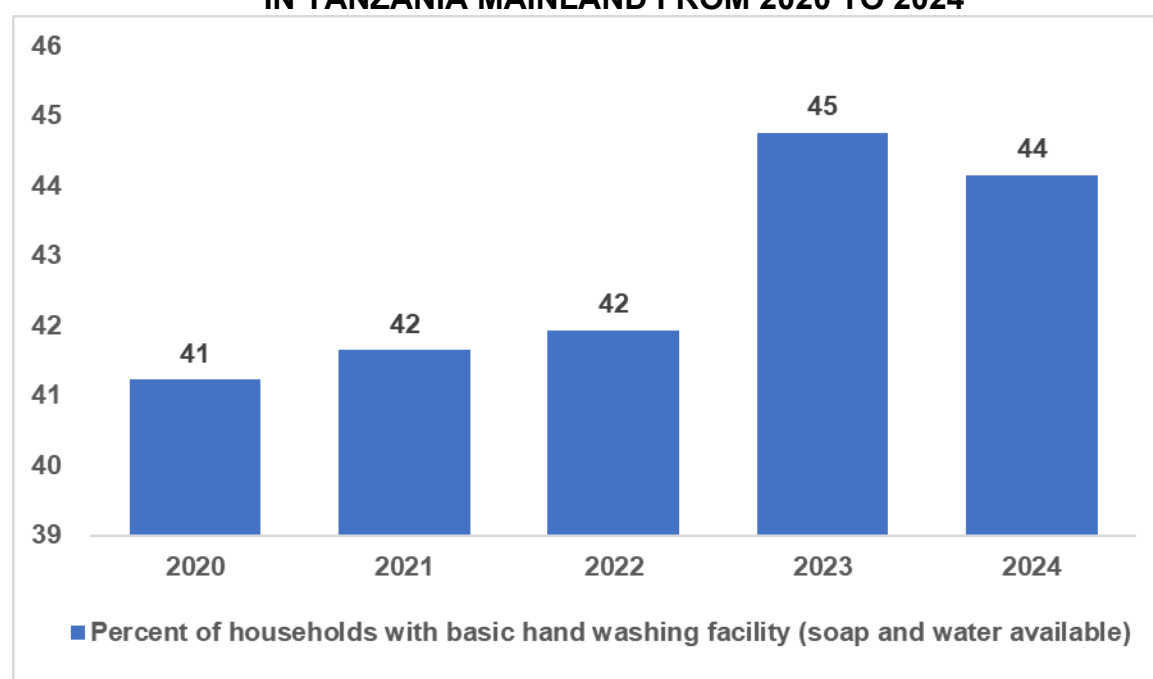

Source: MoH NSMIS, 2020 - 2024

8.5. TREND OF HOUSEHOLDS WITH BASIC HAND WASHING FACILITY FOR FIVE YEARS IN TANZANIA MAINLAND FROM 2020 TO 2024

Figure 63 illustrates the national hygiene coverage as of 2024, indicating a steady increase in households equipped with basic handwashing facilities and soap, rising from 41% in 2020 to 44% in 2024 as shown in figure 60. Handwashing with soap and water is a simple, effective, and affordable measure to prevent diseases and save lives. Globally, 1.37 billion people (18% of the world's population) lack handwashing facilities at home, underscoring the importance of addressing this issue. Handwashing has consistently proven to be one of the most effective ways to reduce the risk of diarrhoea, pneumonia, and other infections. During the COVID-19 pandemic, handwashing played a crucial role in controlling the spread of the virus. Access to water, sanitation, and hygiene (WASH) services alone is insufficient to change human behavior; individuals need to be convinced of their role in disease prevention and require regular reminders to maintain these essential behaviors.

FIGURE 60: TREND OF HOUSEHOLDS WITH BASIC HAND WASHING FACILITY IN TANZANIA MAINLAND FROM 2020 TO 2024

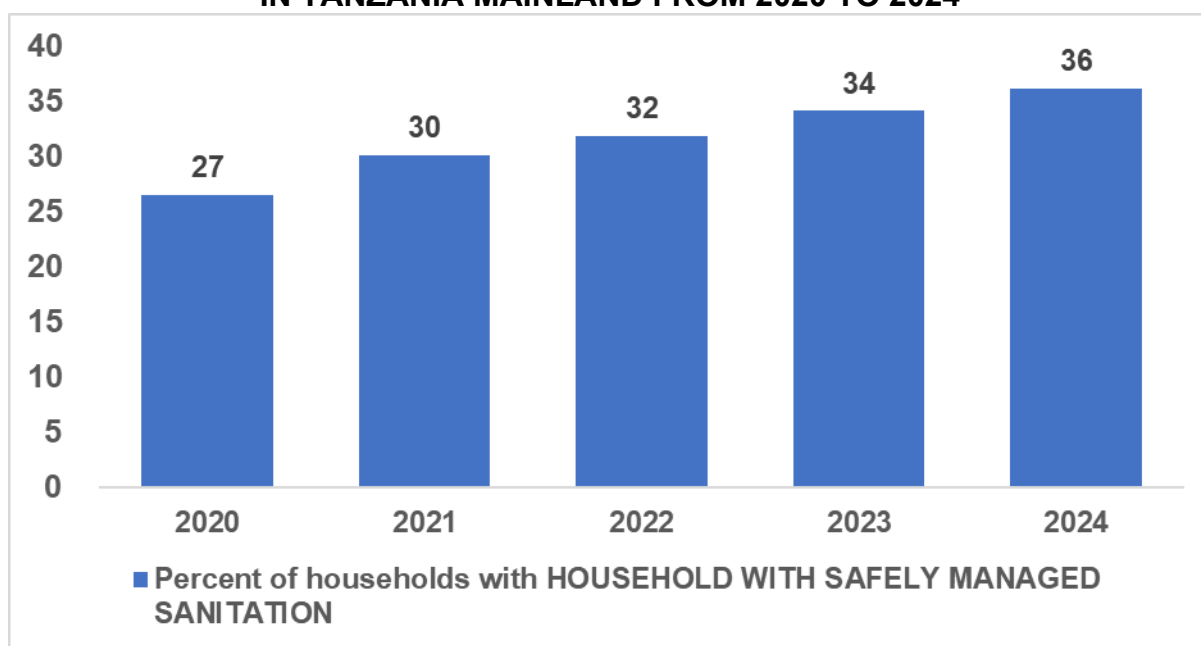

Source: NSMIS, 2019 – 2023

8.6. HOUSEHOLD WITH SAFELY MANAGED SANITATION IN TANZANIA MAINLAND FROM 2020 TO 2024

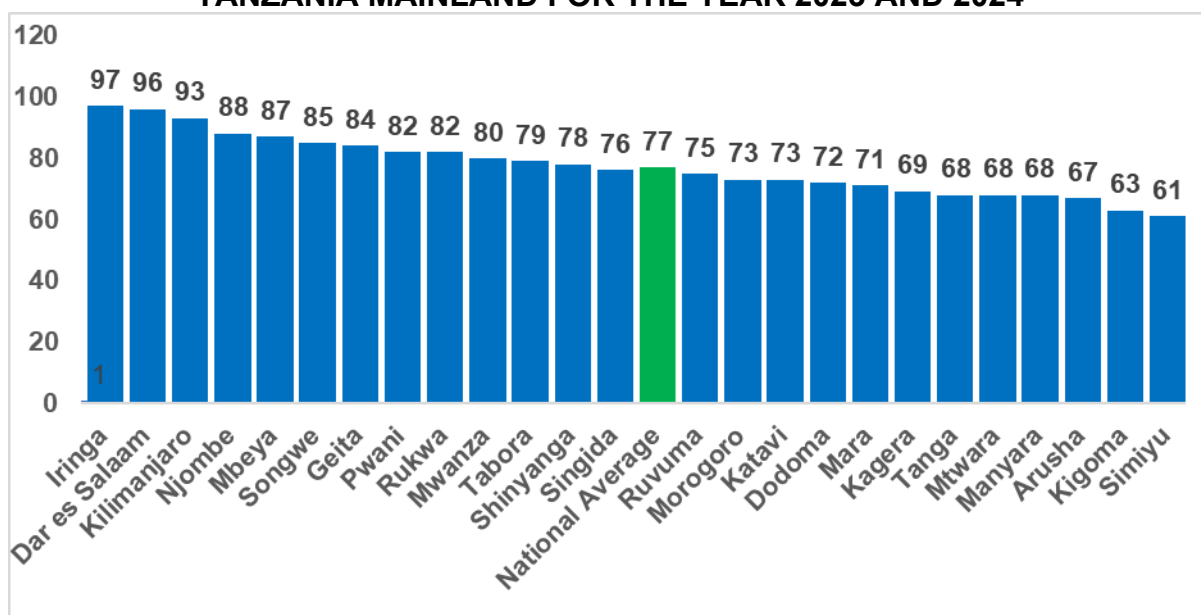

Safely managed sanitation represents the highest level of access to improved sanitation. As depicted in Figure 61, the proportion of households with access to safely managed sanitation increased from 26.25% in 2020 to 36.13% in 2024. This achievement is significant as proper management of fecal matter in the community is crucial for controlling many fecal-transmitted infections.

FIGURE 61: TREND OF HOUSEHOLD WITH SAFELY MANAGED SANITATION IN TANZANIA MAINLAND FROM 2020 TO 2024

Source: NSMIS, 2020 – 2024

FIGURE 62: PERFORMANCE OF REGIONS ON IMPROVED LATRINE IN TANZANIA MAINLAND FOR THE YEAR 2023 AND 2024

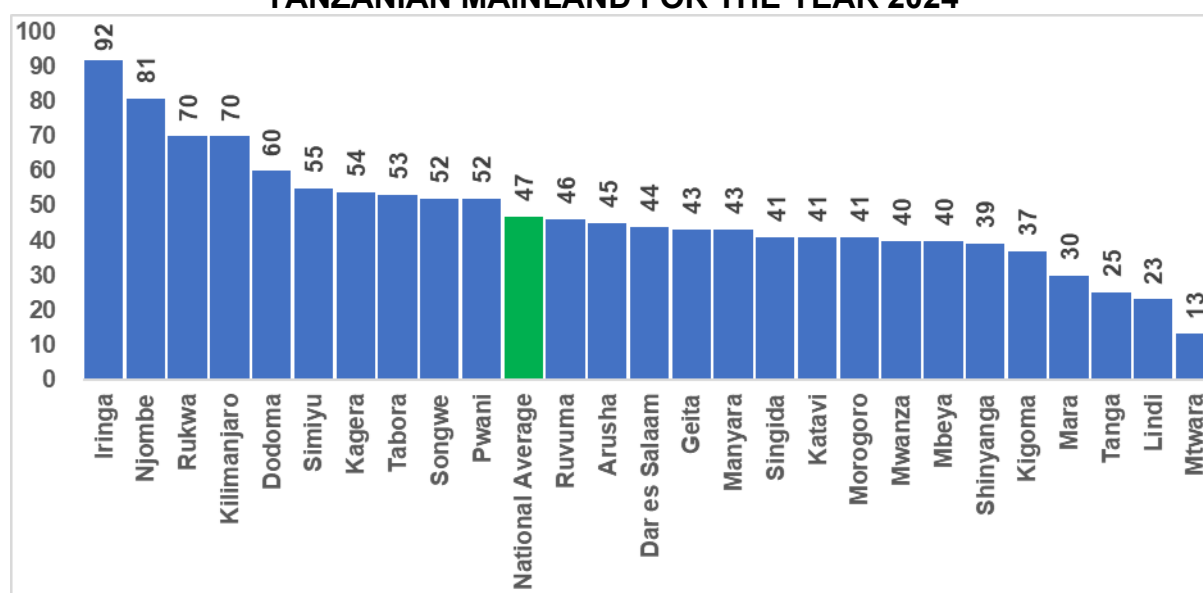

Source: NSMIS, 2022 – 2023

8.7. REGIONAL PERFORMANCE ON HYGIENE AT HOUSEHOLD LEVEL IN TANZANIA MAINLAND FOR THE YEAR 2024

In Tanzania and many other developing countries, hygiene status plays a crucial role in preventing various infections. During the COVID-19 pandemic, handwashing emerged as a critical intervention for preventing and controlling the spread of the disease. Figure 63 illustrates the best-performing regions in terms of household-level handwashing installation, with Iringa leading, followed by Njombe, Kilimanjaro and

Rukwa. Conversely, regions with poor performance include Mtwara, Tanga, Lindi, and Mara.

FIGURE 63: REGIONAL PERFORMANCE ON HYGIENE AT HOUSEHOLD IN TANZANIAN MAINLAND FOR THE YEAR 2024

Source: NSMIS, 2024

8.8. ENVIRONMENTAL PROTECTION AND POLLUTION CONTROL AT HEALTH CARE FACILITIES

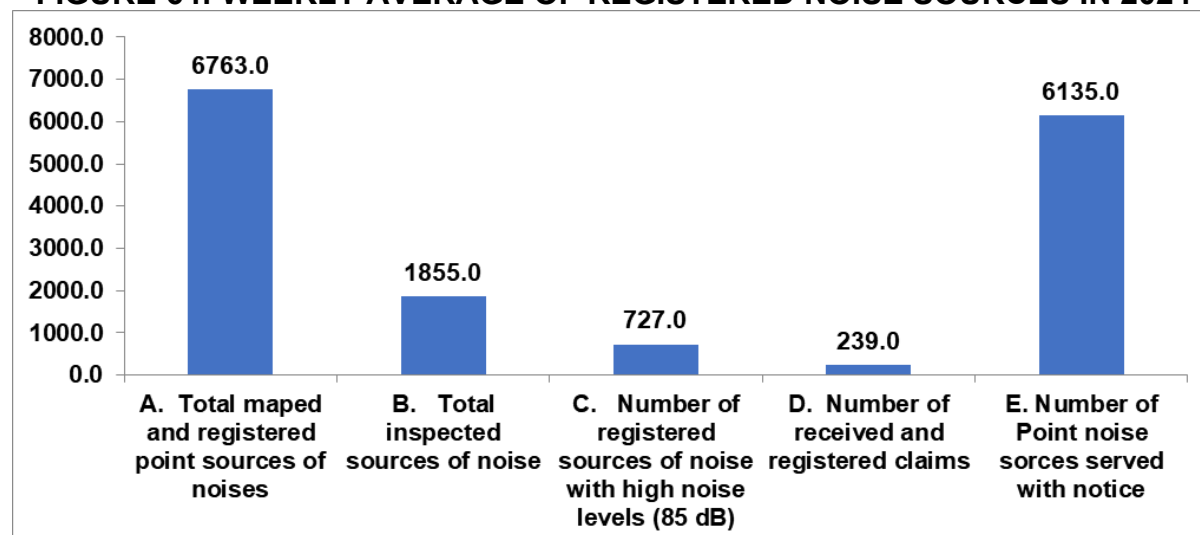

The Ministry is striving to maintain a friendly environment and minimize pollution generated from hazardous hospital waste at health facilities to protect human health and the environment from the adverse effects of such waste. To achieve this, preventive and mitigation measures targeting healthcare waste are being given high priority. This commitment aligns with the Ministry's broader environmental health agenda, which includes controlling various forms of pollution that pose health risks to the population.

The Ministry is actively tracking the management of healthcare waste (HCW) which remains a growing challenge in many health service delivery facilities. In 2024 health facilities across the country generate an average of 237,668 kilograms of waste per week. Out of this, 88,978 kg are classified as hazardous waste requiring special handling, while 148,690 kg are non-hazardous. These wastes are collected, treated, and disposed of in accordance with public health and environmental safety standards. The departmental breakdown shows that outpatient departments (OPD) produce the highest share, with an average of 79,103 kg per week, followed by inpatient departments (IPD) at 12,948 kg, and hospital staff at 6,676 kg per week.

In addition, the Ministry of Health maintains vigilant monitoring of the escalating issue of noise pollution especially in urban areas where social and economic activities are densely concentrated. Throughout 2024, an average of 6,763 noise sources were identified and officially registered each week, with 1,855 of these undergoing inspections (Figure 64). Out of the inspected sources, 727 were found to produce noise levels exceeding 85 decibels (d B) which is a limit recognized for its significant health risks. Addressing public concerns, the Ministry received and acted

upon an average of 239 noise-related complaints weekly, while issuing approximately 6,135 noise control notices each week to the responsible parties. This regulatory enforcement effectively supports other environmental health programs, including the management of healthcare waste.

FIGURE 64: WEEKLY AVERAGE OF REGISTERED NOISE SOURCES IN 2024

8.9. ENVIROMENTAL PROTECTION AND POLLUTION CONTROL AT HEALTH CARE FACILITIES

Between 2023 and 2024, there was a steady increase in the national coverage of high-tech incinerators across various levels of health facilities, demonstrating tangible progress in biomedical waste infrastructure. To begin with, lower-level facilities such as health centers and dispensaries experienced an increase in incinerator coverage from 30% in 2023 to 34% in 2024 (Table 38). This 4% rise shows gradual improvement in waste disposal systems at the primary care level. Meanwhile, district hospitals recorded a more notable increase from 37% to 48%, marking 11% gain. Regional Referral Hospitals (RRHs) maintained full coverage at 100% during both years, reflecting sustained capacity for proper biomedical waste management at the highest level of care. Together, these improvements reinforce the Ministry's ongoing commitment to safeguarding public health through robust environmental and waste management systems.

TABLE 38: ENVIROMENTAL PROTECTION AND POLLUTION CONTROL AT HEALTH CARE FACILITIES

Types of Health facility	Coverage	Coverage
	2023	2024
Lower level (Health centers and Dispensaries)	30%	34%
District	37%	48%
RRH	100%	100%

8.10. WORKPLACE PROGRAMME FOR HEALTH CARE WORKERS IN REGION AND DISTRICT FACILITIES

To enhance the protection of healthcare workers, the WHO and ILO advocate for improved occupational health and safety management at national, subnational, and healthcare facility levels. Sustainable Development Goal 8 emphasizes the importance of providing a decent work environment. Even before the COVID-19 pandemic, the health sector was considered one of the riskiest employments. Risks to the health and safety of healthcare workers, such as infections, musculoskeletal disorders, workplace aggression, burnout, and allergies, can arise from their working environment. The Ministry has implemented a program to support workplace improvements in healthcare facilities and enhance the workforce's capacity to address health and safety diversity at the facility level. Table 39 shows that from 2021 to 2024, 73 facilities in 10 regions underwent capacity building for the health workforce to enhance working conditions. The training emphasized utilizing available resources to improve working conditions, resulting in facilities creating action plans for workplace enhancements to reduce various health risks for workers.

TABLE 39: TRENDS OF THE WORKPLACE IMPROVEMENTS PROGRAMME IN TANZANIA MAILAND FROM 2021 TO 2024

Year	Number of Trained Regions	Number of Trained Councils	Number of Health Facilities Trained	Number of Health Workers Trained
2021	3	20	23	285
2022	2	15	17	204
2023	4	31	35	444
2024	1	7	8	106
Total	10	63	73	1,038

8.11. OCCUPATIONAL EXPOSURE REPORTED IN TANZANIA MAINLAND FOR THE YEAR 2023 AND 2024

Based on the NSMIS 2023 and 2024 data reports, it is evident that the number of reported occupational injuries among health workers at health facilities was 369 in 2023 and 324 in 2024. Similarly, the figures for those who accessed PEP services were 194 in 2023 but decreased to 146 in 2024 (refer to Figure 65), and also health workers reported to complete PEP has reduced to 10, this highlights that most of workers either incomplete the PEP or does not report injuries to initiate PEP. Similarly, the data implicate increase in Musculoskeletal Disorders from 216 to 300 health care workers experience lower backpain due to awkward postures and repetitive work. Therefore, it is imperative to safeguard health workers who are vulnerable to workplace blood infections such as HIV, HBV, and other challenges like musculoskeletal disorders (MSDs) including low back pain and strain. Refer to Table 40 for a breakdown of reported cases by occupation in 2023 and 2024.

FIGURE 65: OCCUPATIONAL EXPOSURE REPORTED IN TANZANIA MAINLAND FOR THE YEAR 2023 AND 2024

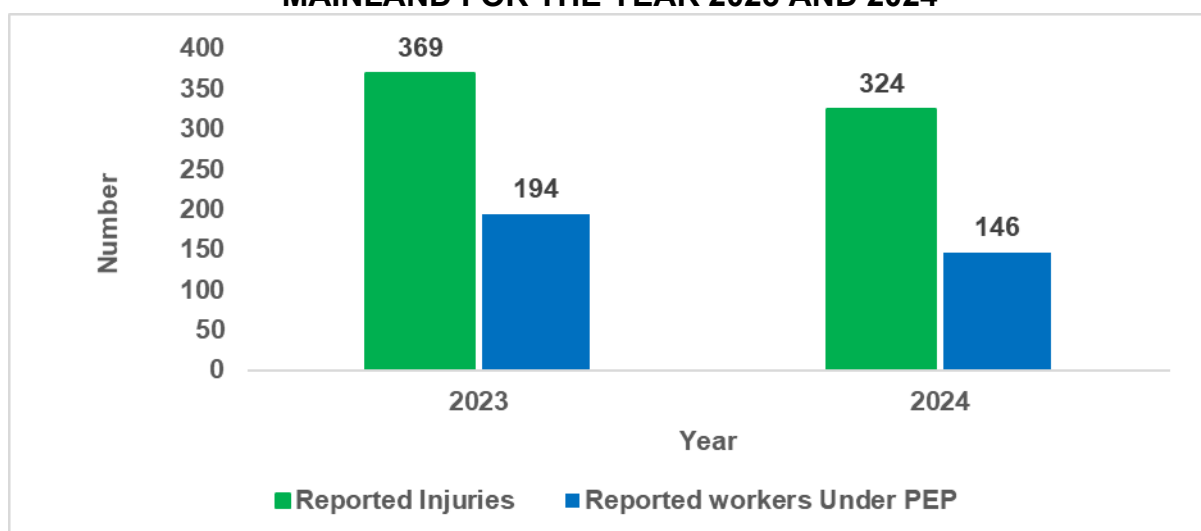

TABLE 40: OCCUPATIONAL EXPOSURE REPORTED IN THE YEAR 2023 AND 2024

Year	Reported Injuries	Reported workers Under PEP	Reported workers Completed PEP	Reported MSDs
2023	369	194	23	216
2024	324	146	10	300

8.12. SCREENING OF TRAVELLERS AT PORT OF ENTRIES IN TANZANIAN MAINLAND FOR THE YEAR 2023 AND 2024

Point of entries (Po Es) are established to implement the International Health Regulation (IHR) 2005 and the Public Health Act (2009), which aim to control diseases at these locations. In order to effectively manage disease at Po E's. The IHR 2005 mandates countries to develop and sustain capacity for preventing and responding to public health incidents. Following investments in and maintenance of Port Health services, the overall performance of Po E's in terms of their capacity to implement the International Health Regulations of 2005 has significantly improved compared to previous years. The results of the Joint External Evaluation (JEE) conducted in August 2023 revealed that the overall capacity of Po E's to implement IHR has increased to 73.3%, a significant rise from the previous score of 40% obtained in 2016. With these results, Tanzania has made remarkable progress in enhancing the capacity for delivering health services at its borders and in preventing diseases in these areas.

Table 41 illustrates that a total of 8,375,047 travelers were screened in 2023, comprising 1,733,502 international travelers and 6,641,545 domestic travelers. Generally, the number of arriving international travelers was observed to have slightly increased due to increased social economical interaction. In 2024, a total of 10,532,274 travelers were screened, with 2,886,076 being international travelers and

7,646,198 being domestic travelers. None of the travelers were found to have dangerous public health infectious diseases in either of the two years.

TABLE 41: NUMBER OF TRAVELLERS SCREENED AT POINT OF ENTRIES IN 2023 AND 2024

Year	Domestic Travelers	International Travelers	Total
2023	6,641,545	1,733,502	8,375,047
2024	7,646,198	2,886,076	10,532,274
Total	14,287,743	4,619,578	18,907,321

Source: Afya Msafiri IMS, 2024

Conversely, Table 42 illustrates the efforts to control Yellow Fever disease at points of entry. In 2024, a total of 721,773 travelers were screened for their vaccination status against Yellow Fever, with 15,212 travelers receiving vaccination due to lack of proof of vaccination. This figure represents a significant increase compared to 2023, where 5,642,611 travelers were screened and 11,747 were vaccinated during the same period.

TABLE 42: TRAVELLERS SCREENED FOR YELLOW FEVER FOR THE PERIOD OF 2023 AND 2024

Year	Travelers Screened for Yellow Fever Cards	Travelers with NO Yellow Fever Cards Vaccinated
2023	5,642,611	11,747
2024	721,773	15,212
Total	6,364,384	26,959

CHAPTER NINE

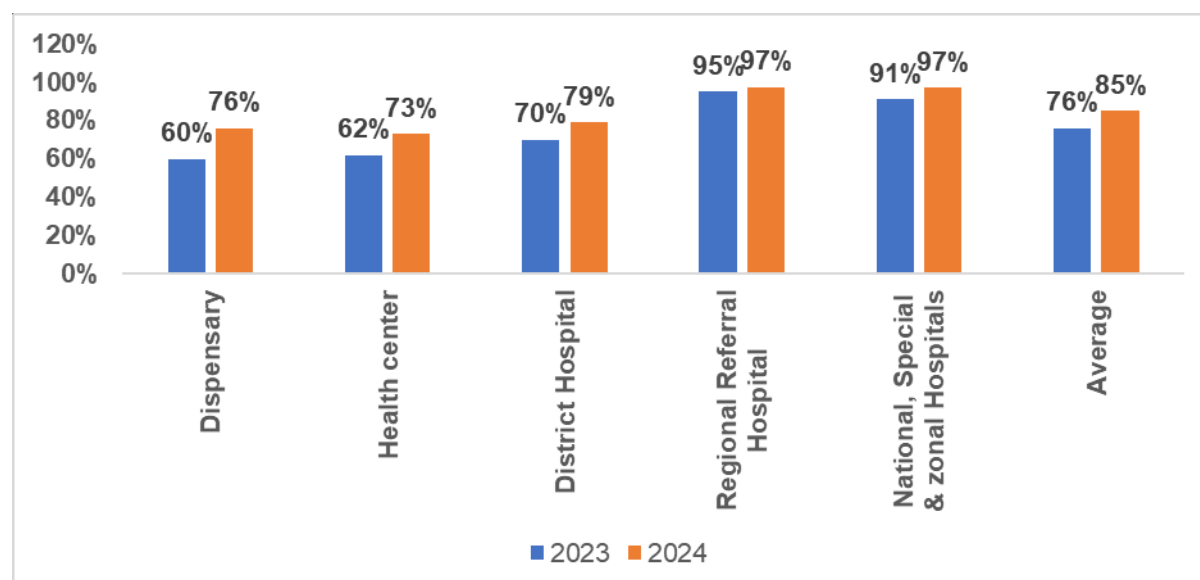

9.0. HEALTH COMMODITIES AVAILABILITY STATUS FROM HEALTH FACILITIES -2024

The Government of Tanzania continues to enhance the availability of essential medical supplies, including medicines, devices, equipment, and laboratory reagents. This is reflected in the increased budget allocation from 200 billion to 205 billion for the procurement, storage, and distribution of health commodities from the financial year 2021/2022 to 2023/2024, aiming to reach even the most remote areas. The Health Sector Strategic Plan V sets ambitious targets, aiming for 100% stock availability across all health facilities nationwide.

This chapter provides an overview of the availability of priority health commodities at health facilities over two consecutive years. Figure 66 illustrates the availability of health commodities, such as medicines, medical devices, and laboratory reagents, in 2023 and 2024 across different levels of health facilities. In 2024, the average availability of health commodities stood at 85%, marking a 9% increase from the 76% recorded in 2023, although it remains below the national target.

Furthermore, there was notable improvement in the availability of priority health commodities from 2023 to 2024: dispensaries saw an increase from 60% to 76%, health centers from 62% to 73%, district hospitals from 70% to 79%, regional referral hospitals from 95% to 97%, and national, special, and zonal hospitals from 91% to 97%.

CONCLUSION

In 2024, Tanzania's health care sector experienced significant progress, marked by increases in the number of health facilities, immunization coverage, and antenatal care services. The number of health facilities grew by 8.8%. Notably, all other antigens reported coverage rates of above 90%, except for Td2+, which recorded 88% coverage. These impressive achievements reflect the continued efforts of the immunization program and its commitment to safeguarding public health.

Improvements in antenatal care and a rise in facility-based deliveries also indicate forward movement toward national health goals. Furthermore, a decline in open defecation and a higher number of households with improved latrines underscore notable advancements in public health and sanitation.

Despite these gains, the healthcare sector continues to face significant challenges, especially regarding the shortage of health workers, only 45% of the required workforce is currently in place. This represents an improvement from 64% shortage in 2023 to 55% in 2024. Additionally, although the availability of health commodities has improved, it still falls short of the national target of 100%.

Despite these challenges, the government's dedication to strengthening healthcare is evident in its focused initiatives to expand health facilities, boost immunization rates, and enhance maternal and child health services, demonstrating a sustained commitment to meeting both present and future health demands.
